Auto GCAS/ACAS

Early identified:

High G and ground collision

Low visibility/high turning rate and mid air collision.

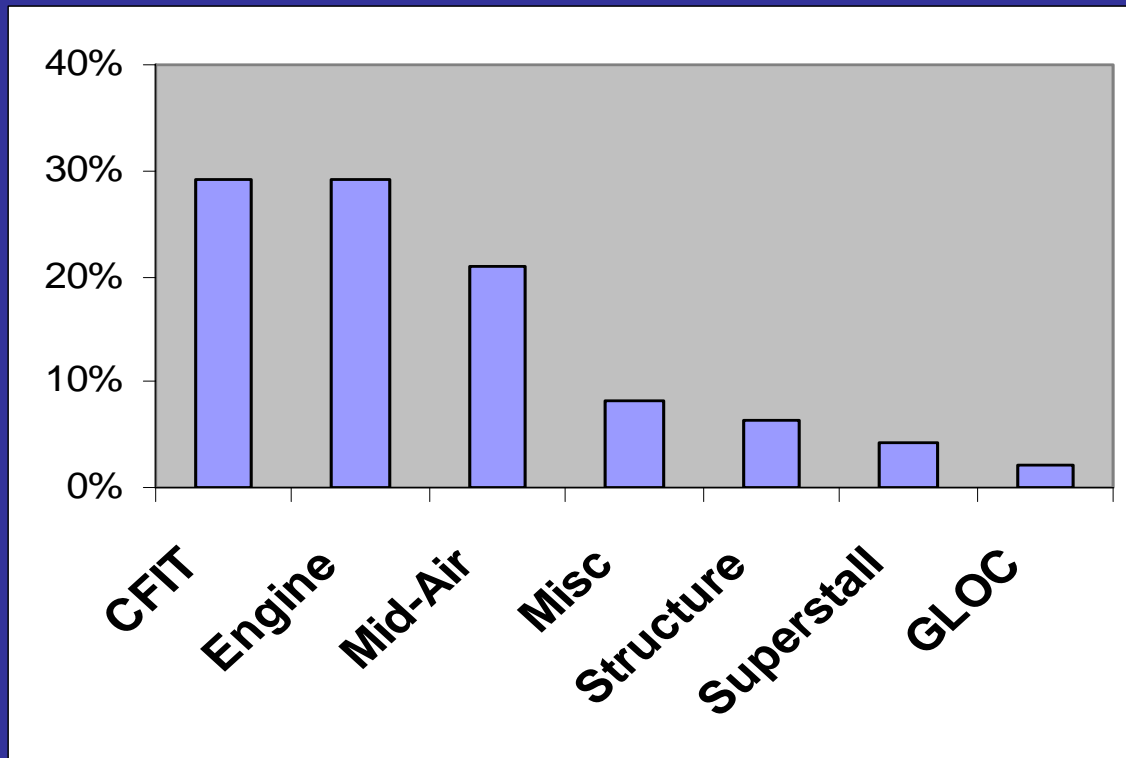

Auto GCAS

Automatic Ground Collision Avoidance System

Background

The AutoGCAS Team

FMV

SAAB

Edwards AFB

Successful program

- Nominated for Aviation week Laurel Award
- "Runner up" for Flight International Flight Safety Award
- Will save Life

Automatic Collision Avoidance System

Automatic Collision Avoidance System

- **Cooperation governed by a Project Annex to the US - Sweden Technology Research and Development Projects Agreement (TRDP)**
- **Equal share financing USA-Sweden**
- **Organizations involved; AFRL, USAF Test Pilot School (TPS) and FMV**
- **Three main contractors involved (Boeing, Lockheed-Martin and SAAB)**

Eglin AFB

Flight test

- The algorithm is evaluated during a flight test late summer 2003.
- The flight test is performed in cooperation with the US Air Force Test Pilot School at Edwards AFB.
- The tests were finished by 23 August 2003.
- The team will then evaluate the test results and issue a final report.

Test aircrafts were a “standard” F-16 and the in-flight-simulator F-16 VISTA.

Both US and Swedish pilots participated in the flight tests

- Preliminary results are promising
 - The algorithm seems to work very well
 - We got avoidance maneuvers, more or less as predicted in the simulations
 - We have identified two essential parameters for a successful implementation, navigation accuracy and the fidelity of the aircraft response model.
-
- Will Save Life
