

...and the future network based defence systems...

How it started

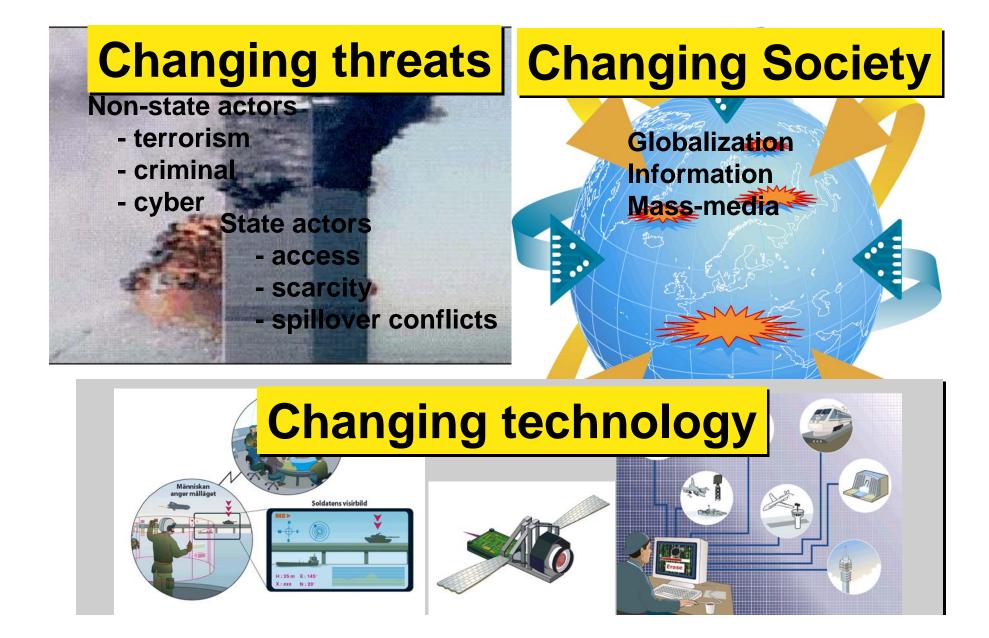

Changed security environment

Violence in the Globalization Era

But most of system's power and competition are up here . . .

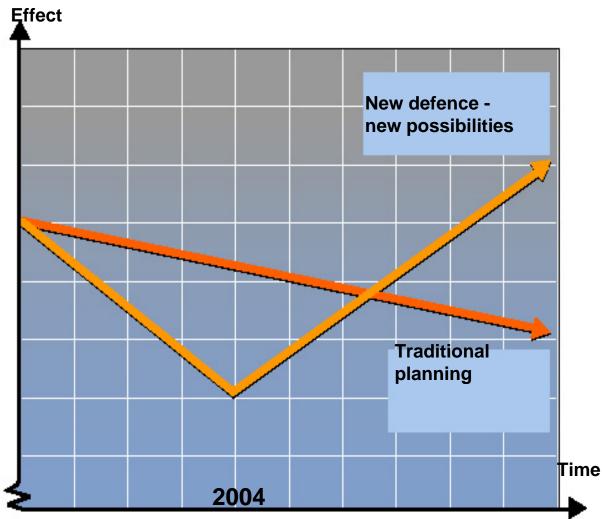

- Economics races ahead of politics
- Technology ahead of rules
- Potential threats ahead of realized
- Vulnerabilities ahead of robustness

violence and "threats" are down here

A strategic opportunity

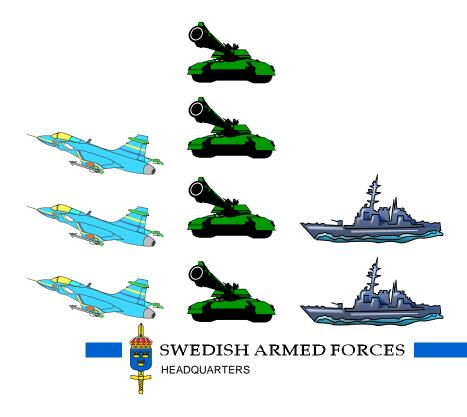

Dynamic Engagement

Platform-centric force

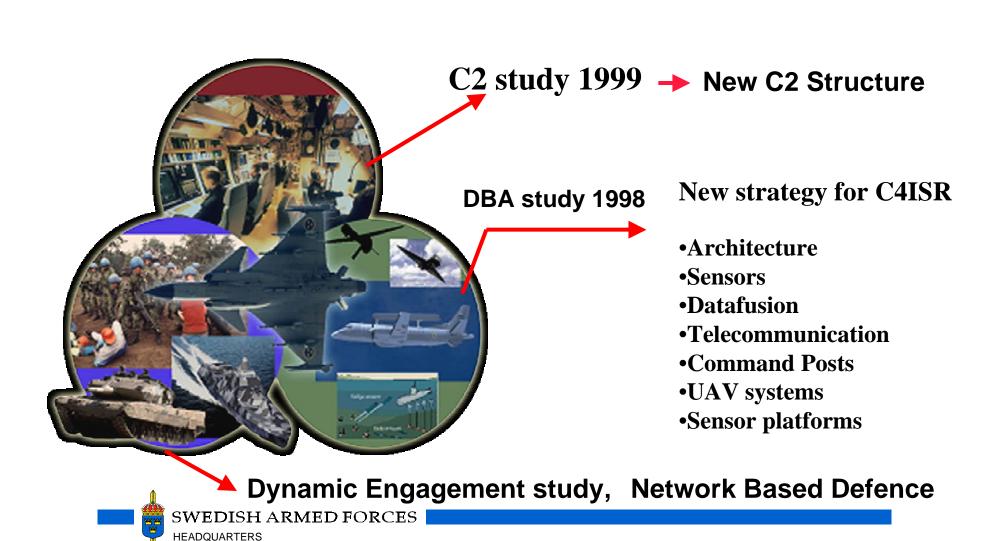

Massing Forces

Network-based force
Massing Effects

What We Have Done

Swedish Armed Forces development Strategy

is

based on Network Based Defence concept

Backed up by the Parliament and Government

•Supremes Commanders directives and guidelines to the organization

•Deliverables 2003-2006

Doctrine &C2 methods

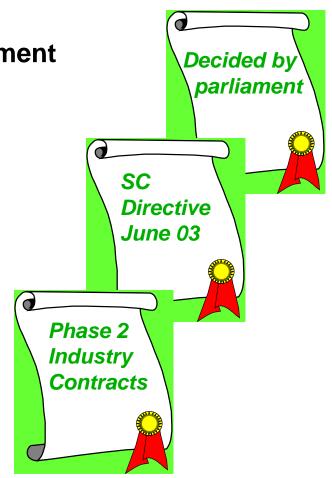

Joint Architecture

Design principles

Demonstrations

Experimentations

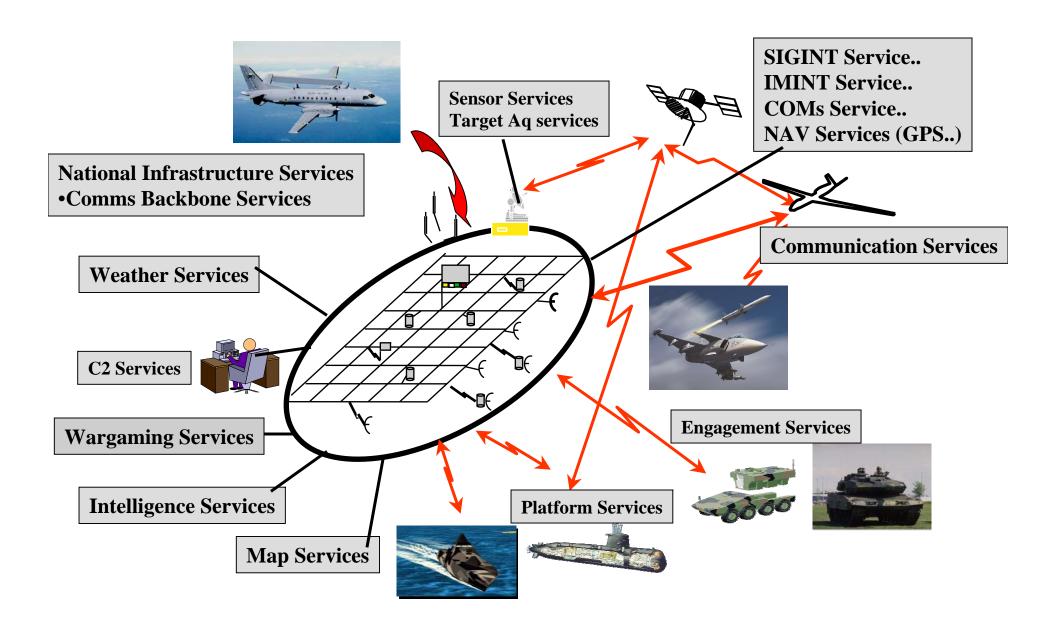

Training&Exercises

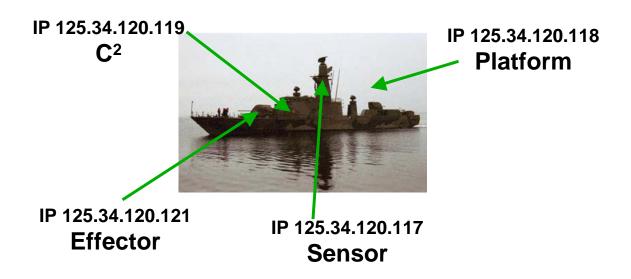

Networked characteristics

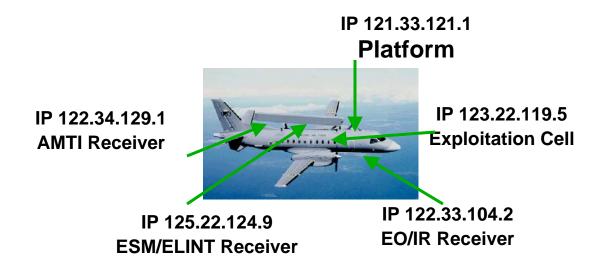

- Distribution of resources for a significantly changed modus operandi
 - Move information not physical objects
 - Create self synchronized systems
 - Market behavior not rigidity
 - Value in the combinations and relations not in "things"
- Create a shared understanding to create innovation

A Service Based Defense Concept

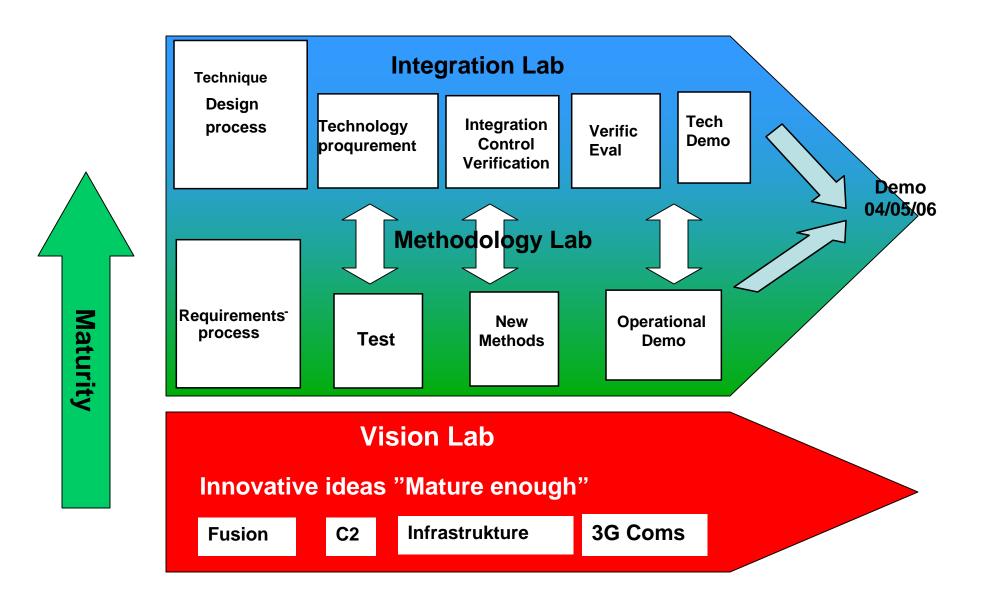

....Individual Addressability to access NBD effects from platform....

IP Addresses are Notional

Demonstration and Experimentation Building Blocks

Global and Regional Trends for Conflict

These Trends Demand New Thinking, New Education, and New Training

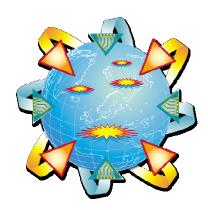

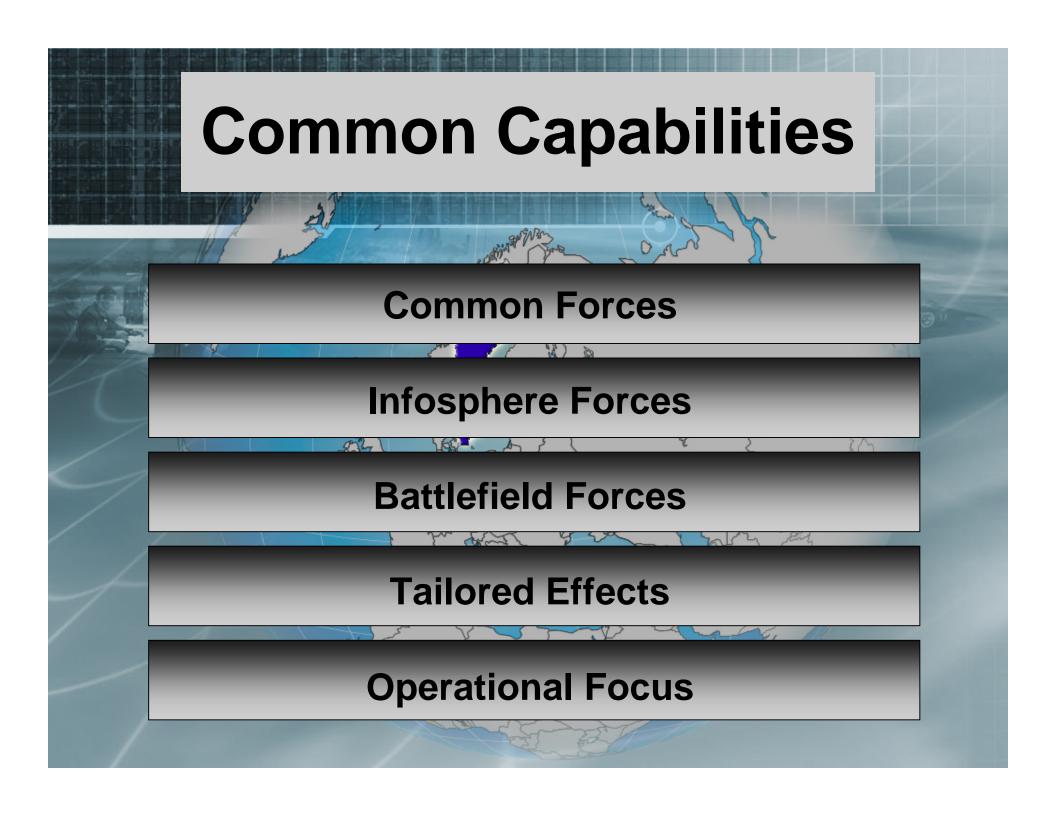

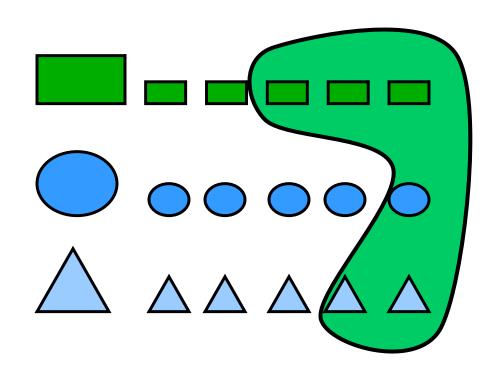

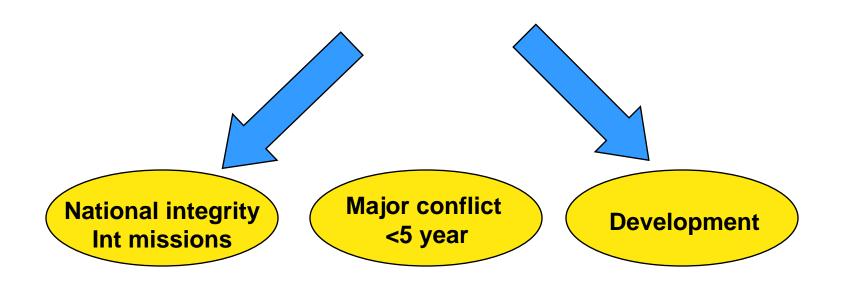

Flexible Joint Taskforces

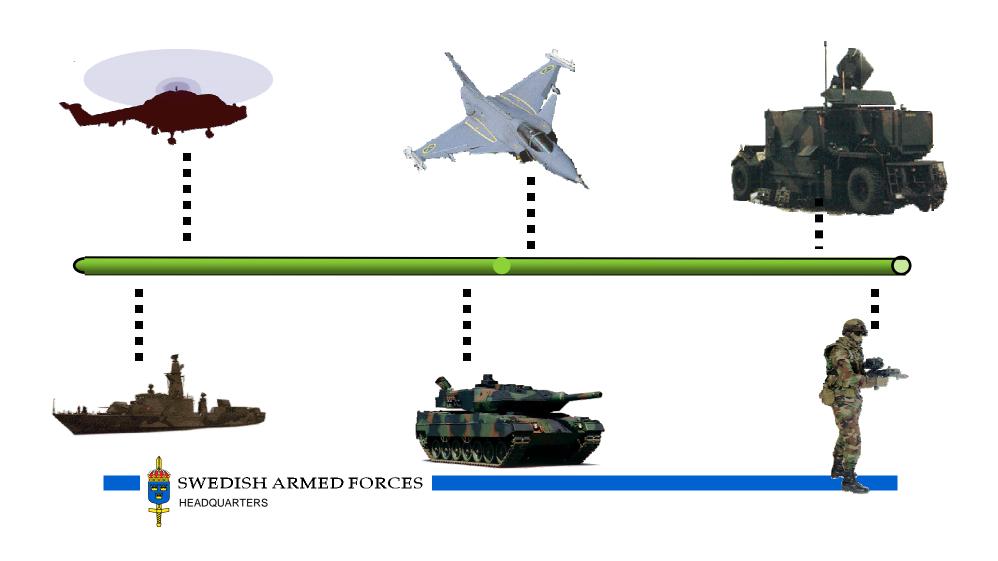

Future Capabilities

Horizontal integration based on the NBD architecture

....People, Doctrine, Platforms, Organisation...
