

Joint Command and Control (JC2) Capability & C2 Data Model

Mr. Richard Lee

ADUSD (Network Centric Warfare & Interoperability)

ODUSD (advanced Systems & Concepts)

703-695-7938

December 1, 2003

1

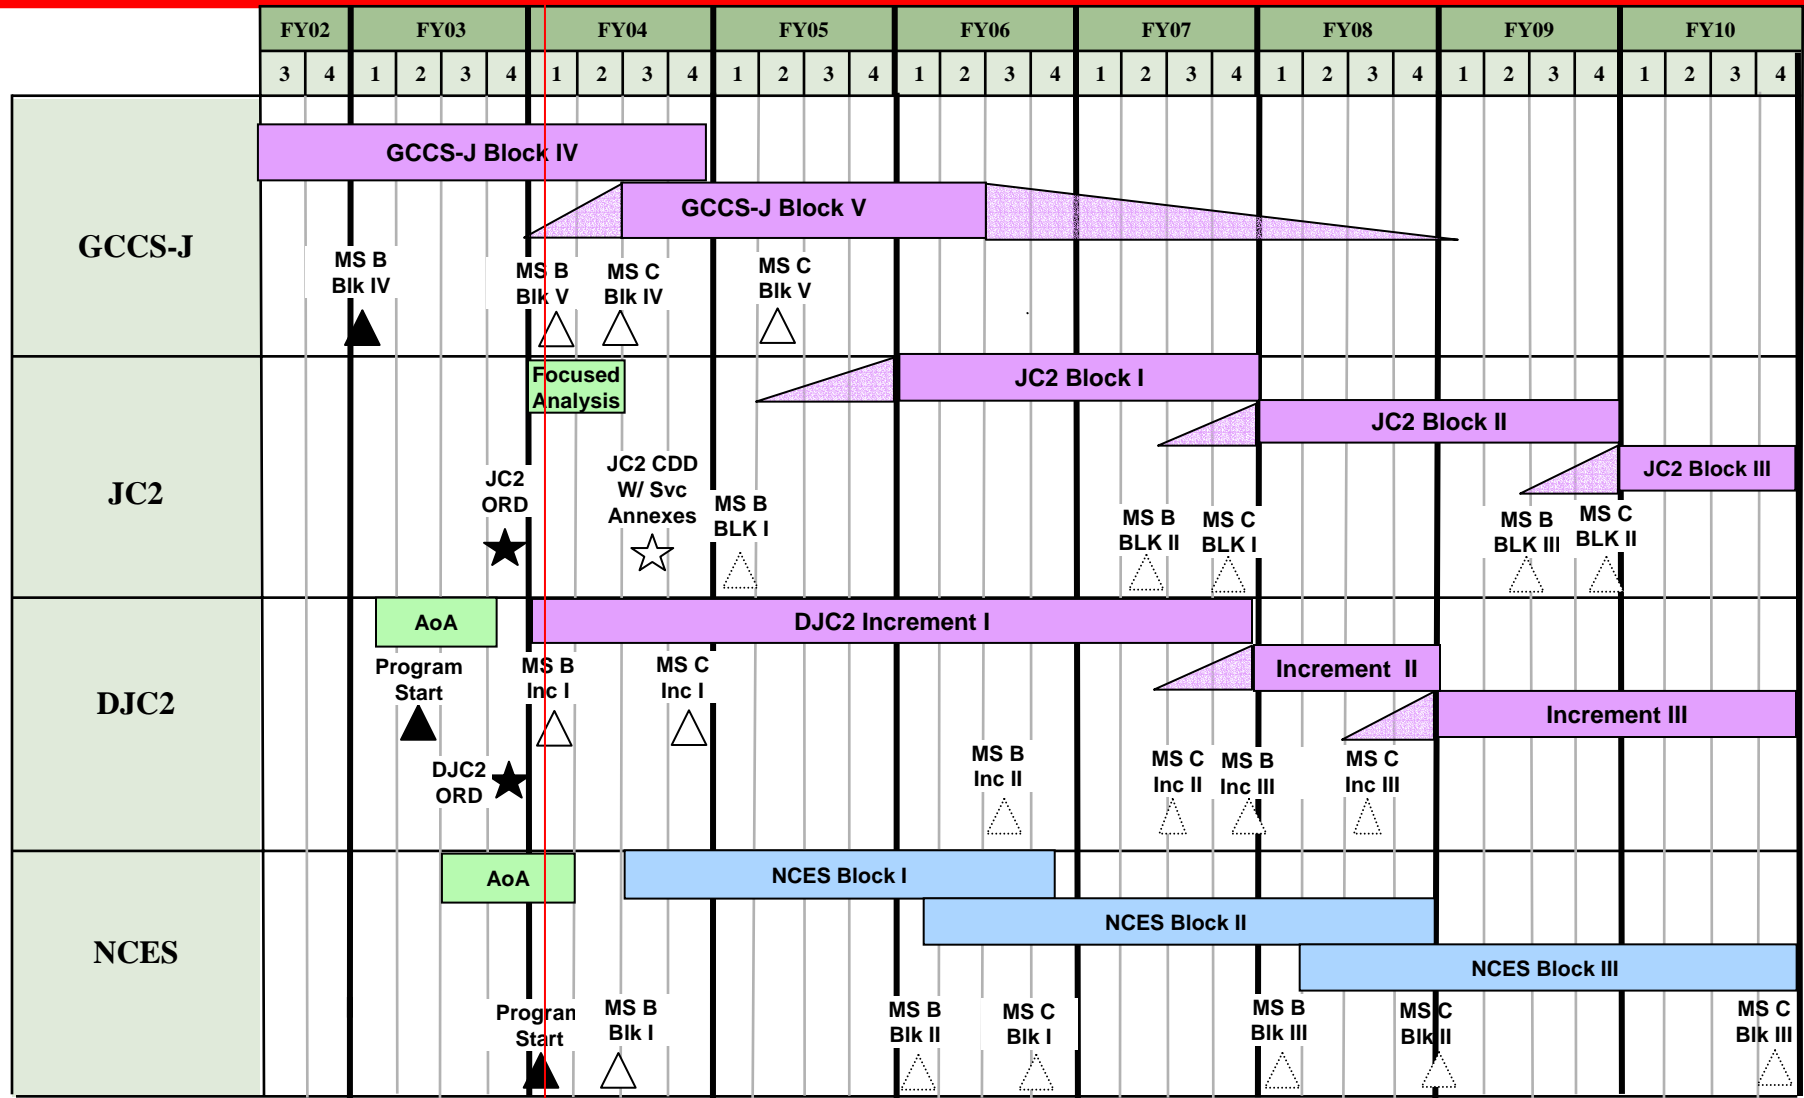

Agenda

- Provide some background on JC2
 - Joint Command and Control capability
 - Convergence and replacement for Global Command & Control System – Joint (GCCS-J) and Service variants
- Expose emergent concepts for interoperability derived from the Multilateral Interoperability Programme
- Identify programmatic opportunities

Program Schedule Synchronization

GCCS-J/JC2/DJC2/NCES

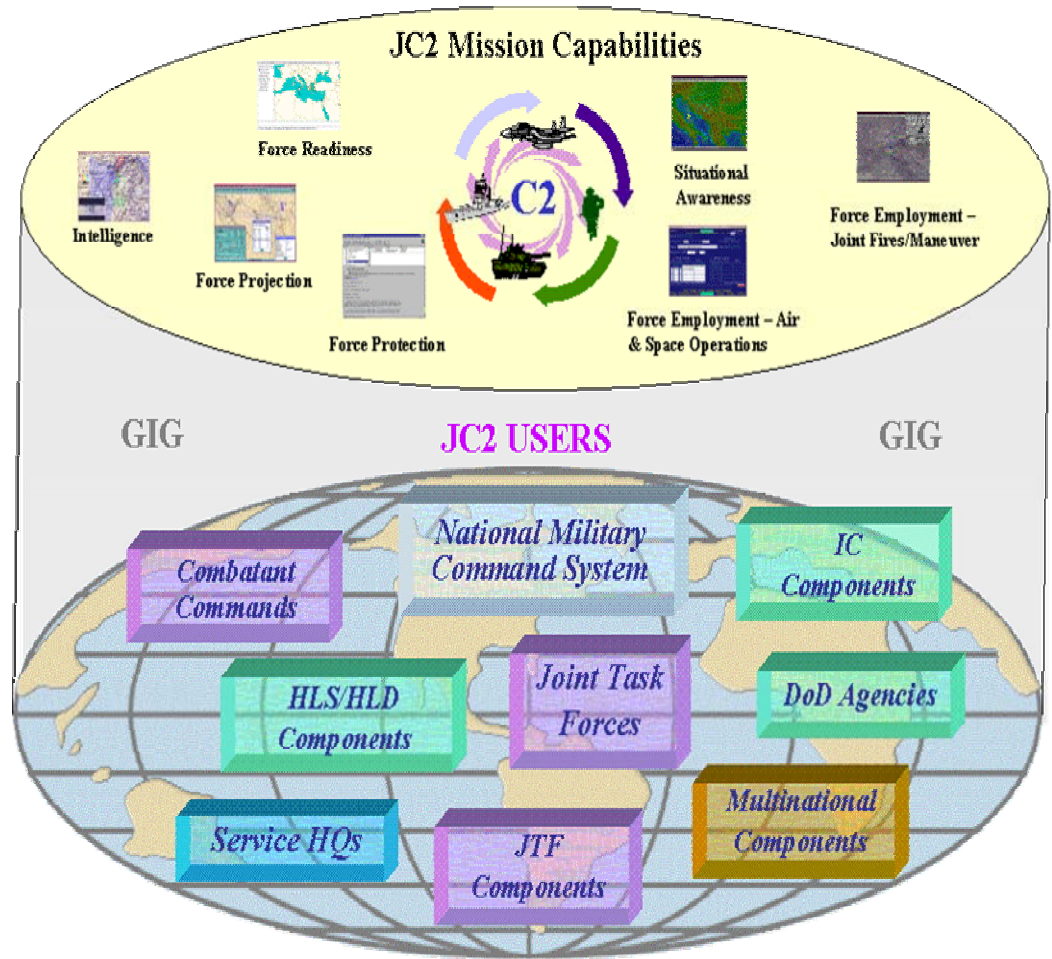

▲ Actual Program Milestone △ Projected Program Milestone △ Potential Program Milestone

Draft as of 3 Nov 03

Joint Command and Control (JC2) Operational Concept

- Migrate to a single joint C2 architecture
- Support joint C2 requirements from NMCS to JTF Components
- Organized along 7 joint Mission Capability Packages and cross-functional services
- Based upon Global Information Grid (GIG) enterprise services

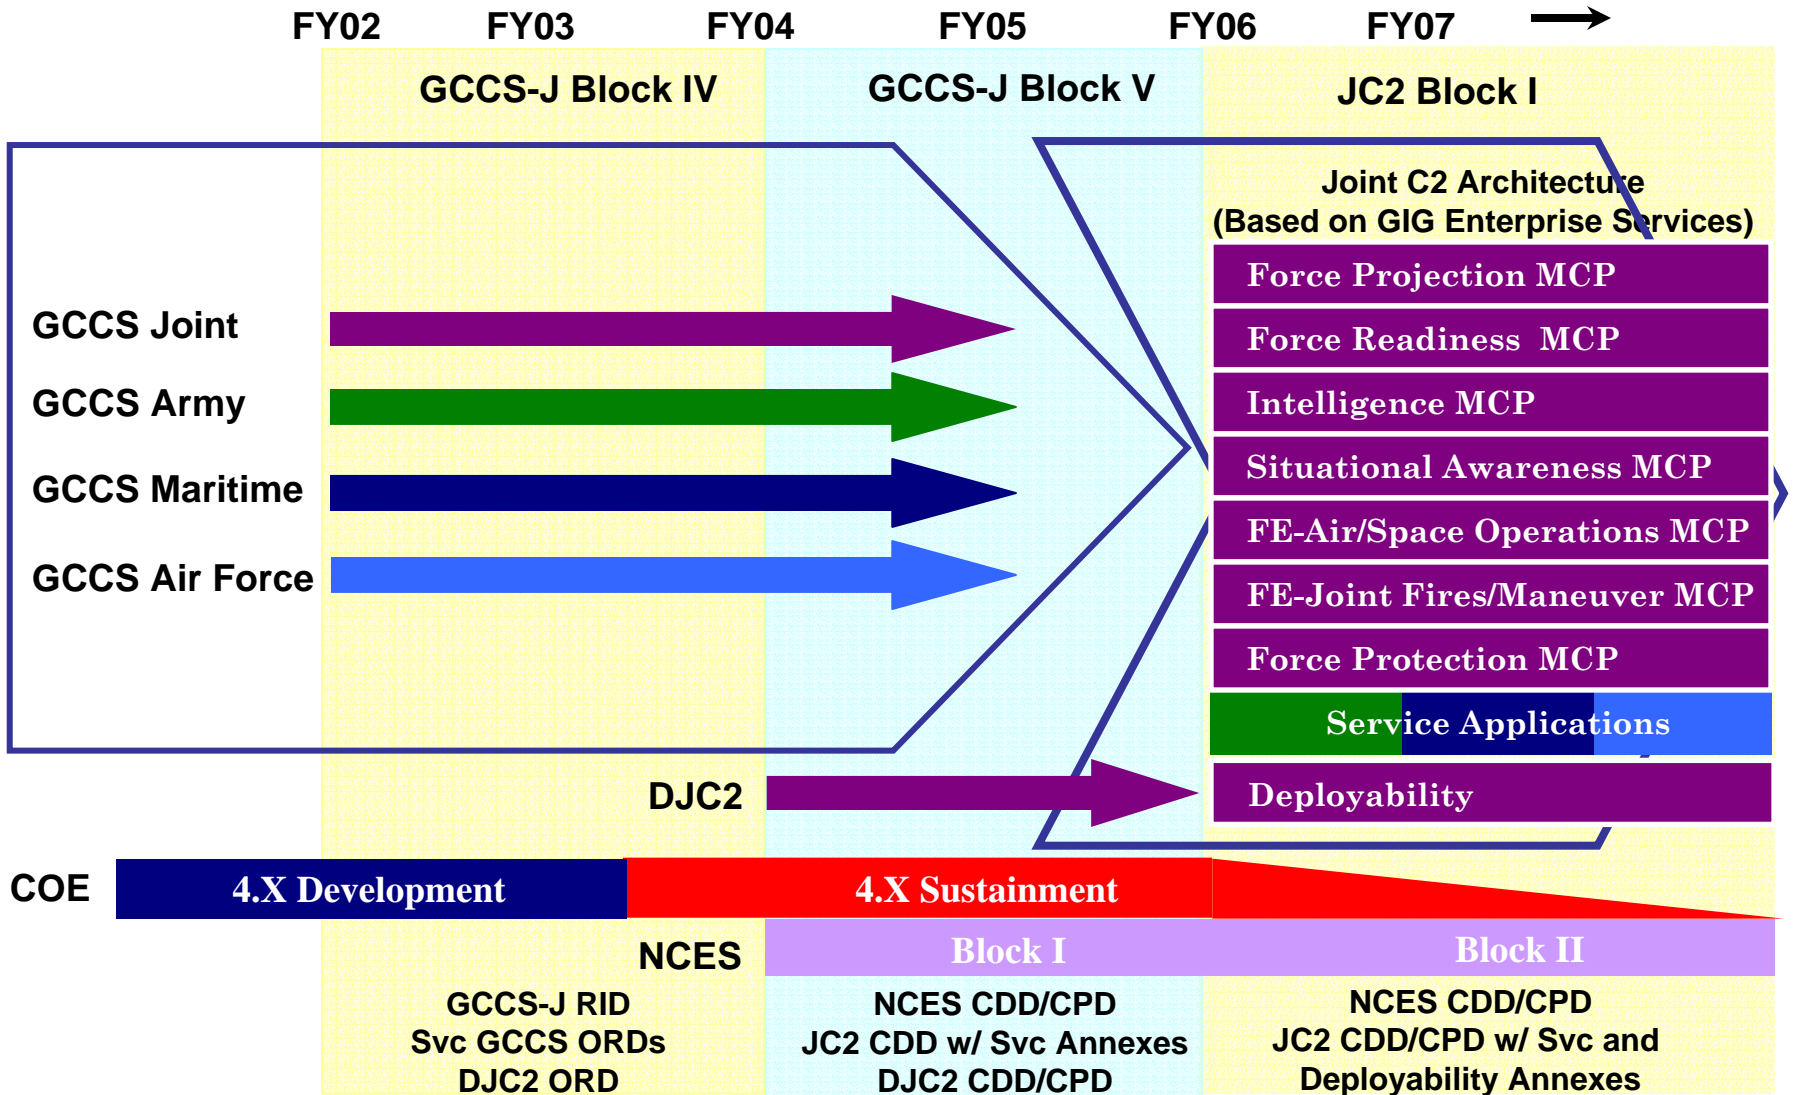

NMCS: National Military Command System

JC2 OV-1

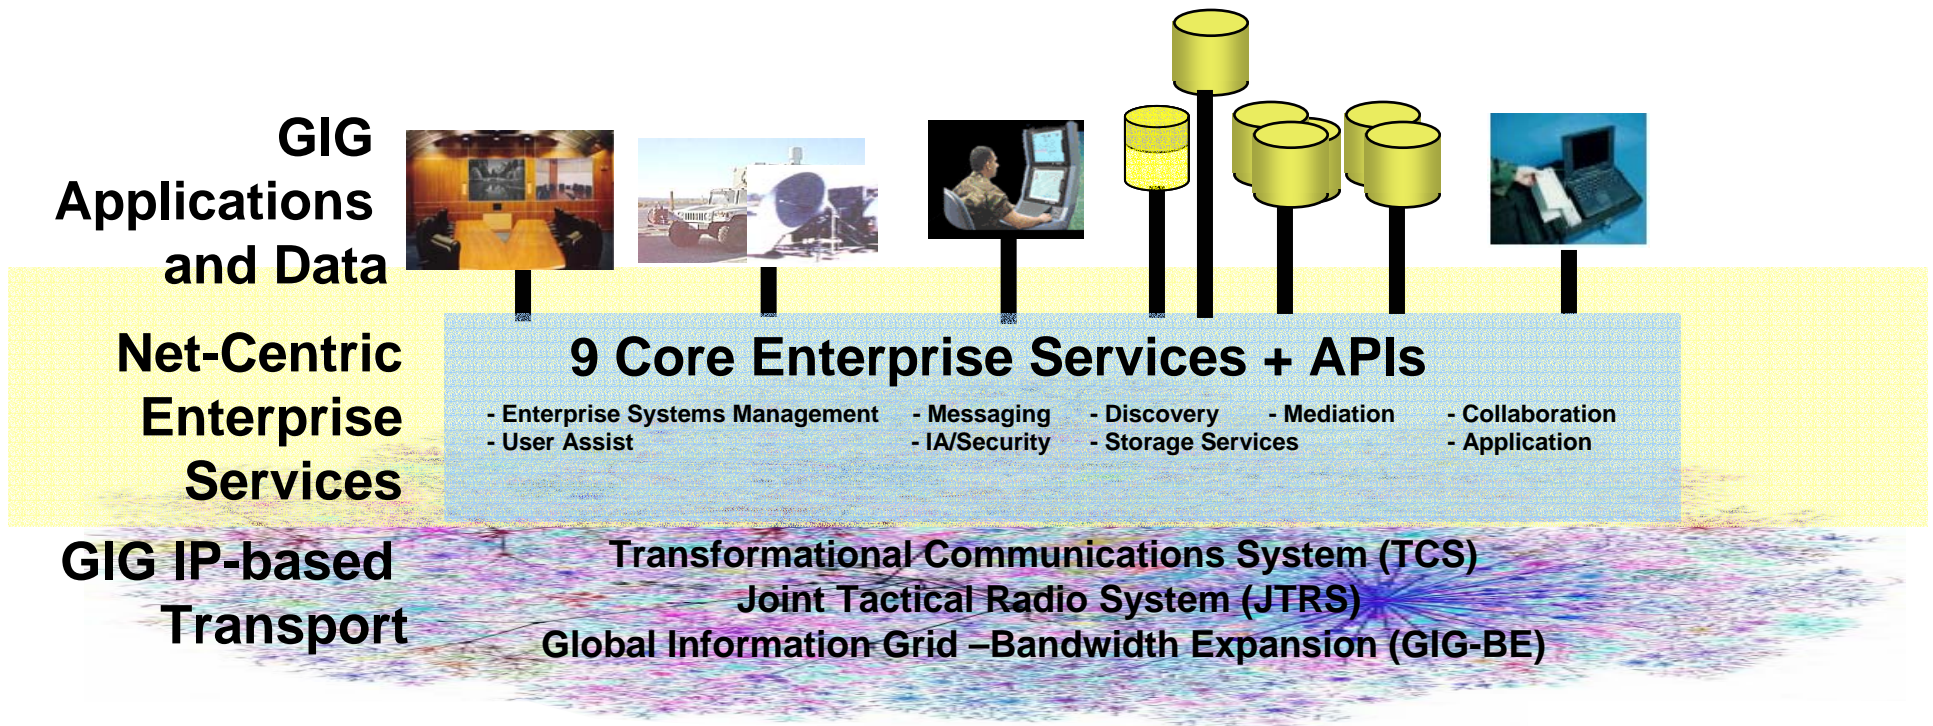

Joint Command and Control (JC2) Vision

Net-Centric Enterprise Services (NCES)

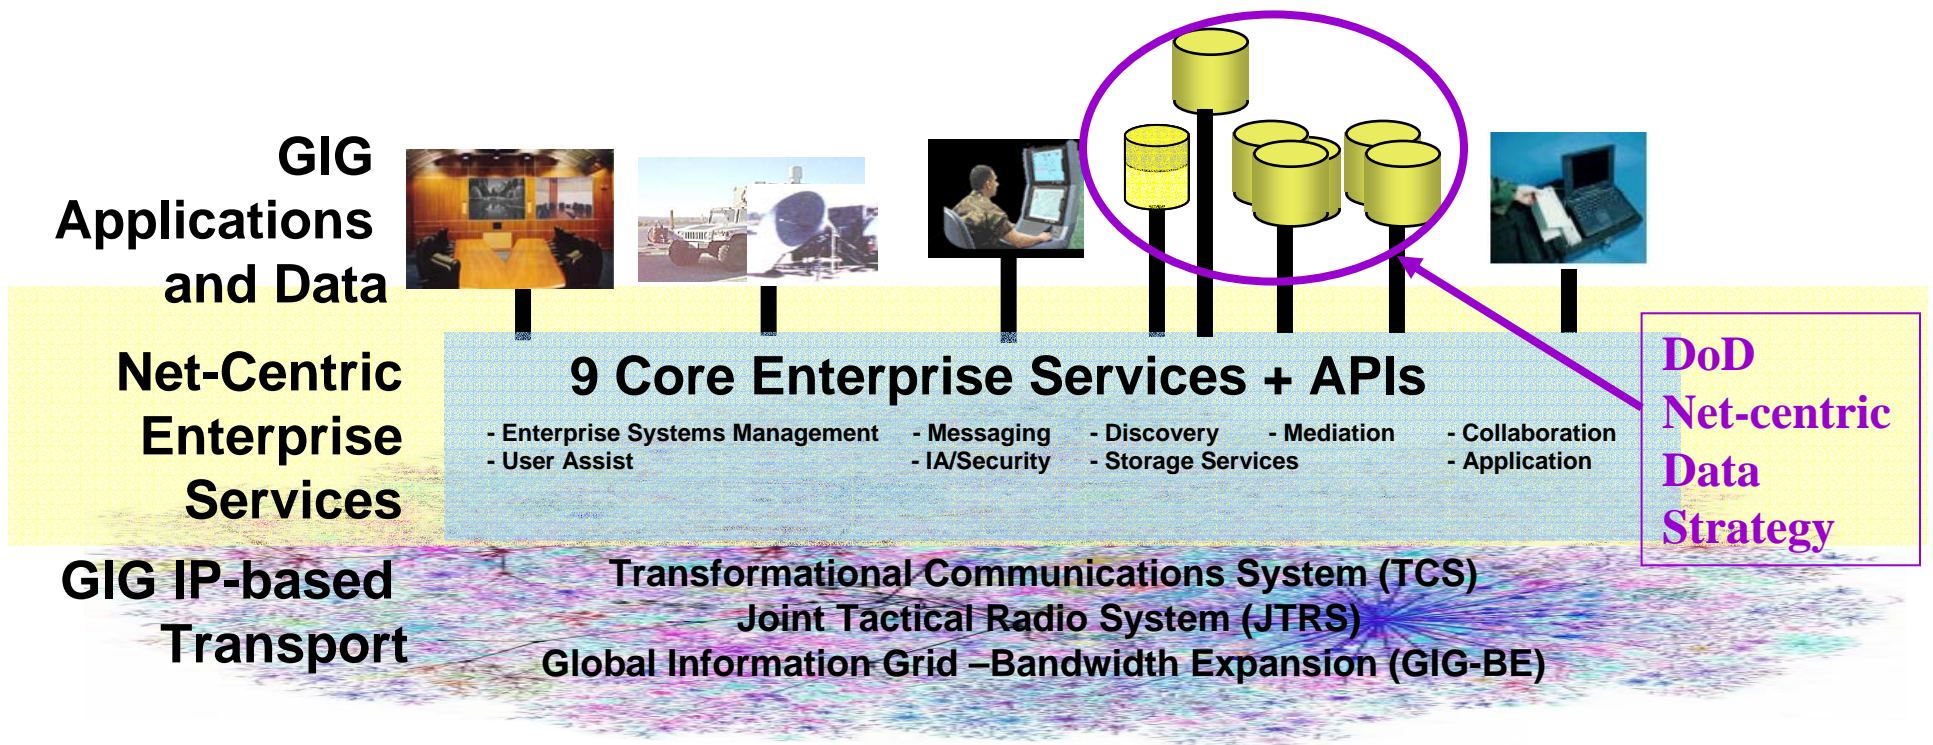

Enables rapid exploitation of diverse data sources by GIG users in a manner that can be customized to meet specific mission demands

Net-Centric Enterprise Services (NCES)

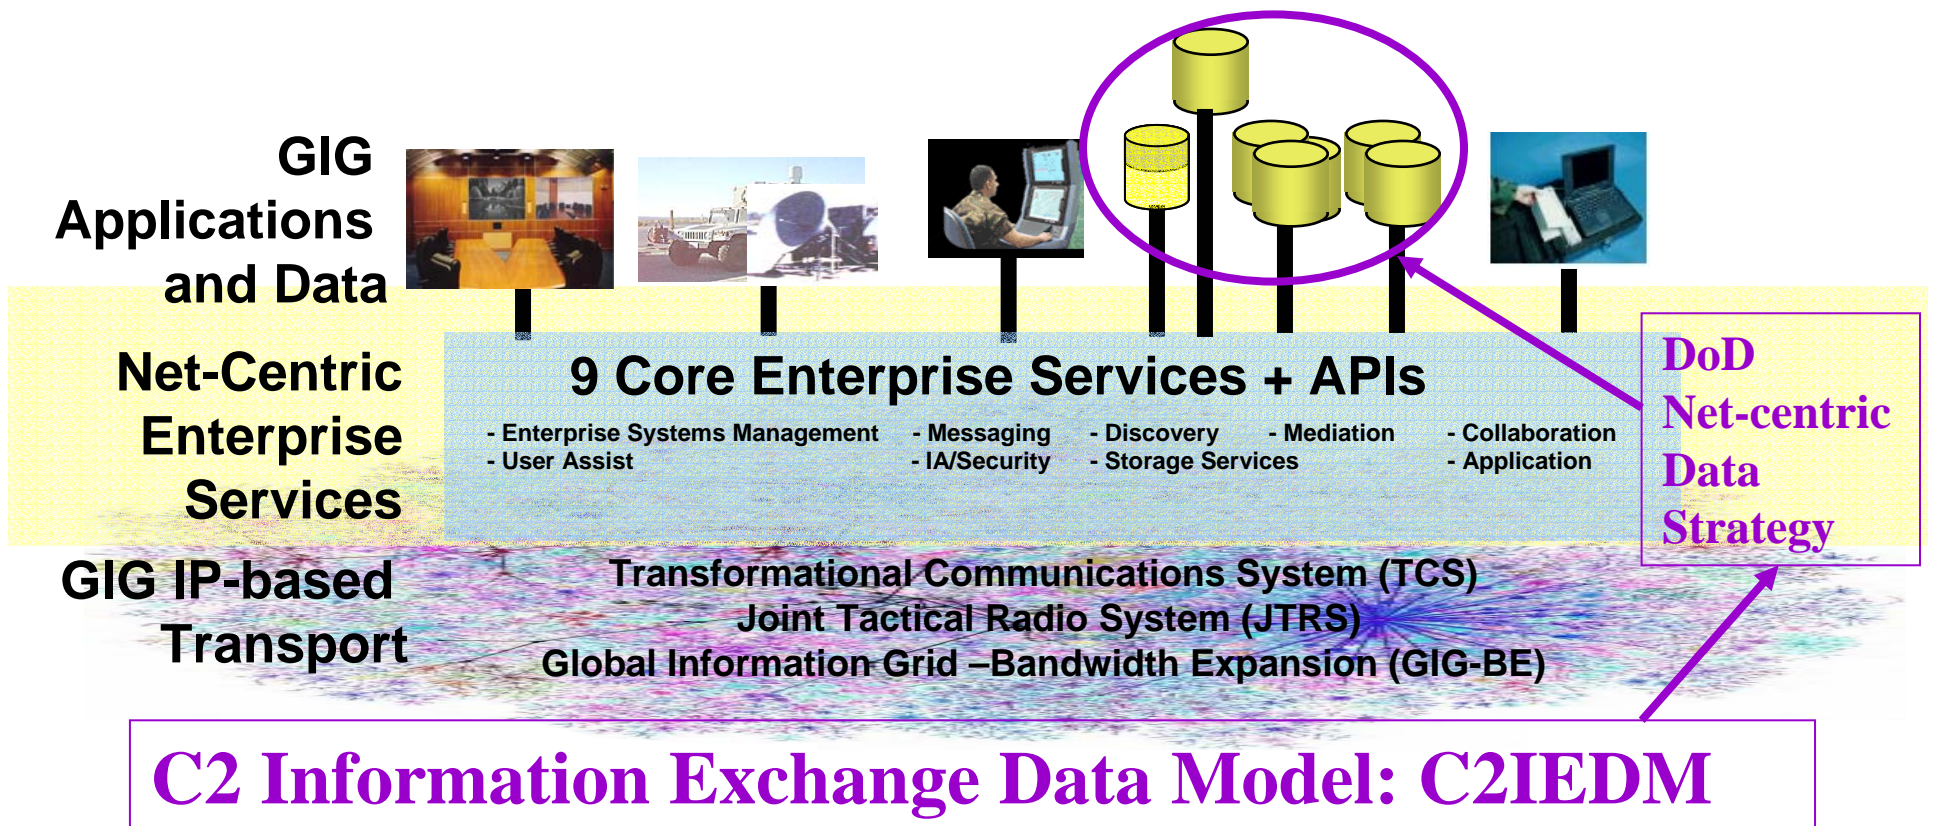

Enables rapid exploitation of diverse data sources by GIG users in a manner that can be customized to meet specific mission demands

Net-Centric Enterprise Services (NCES)

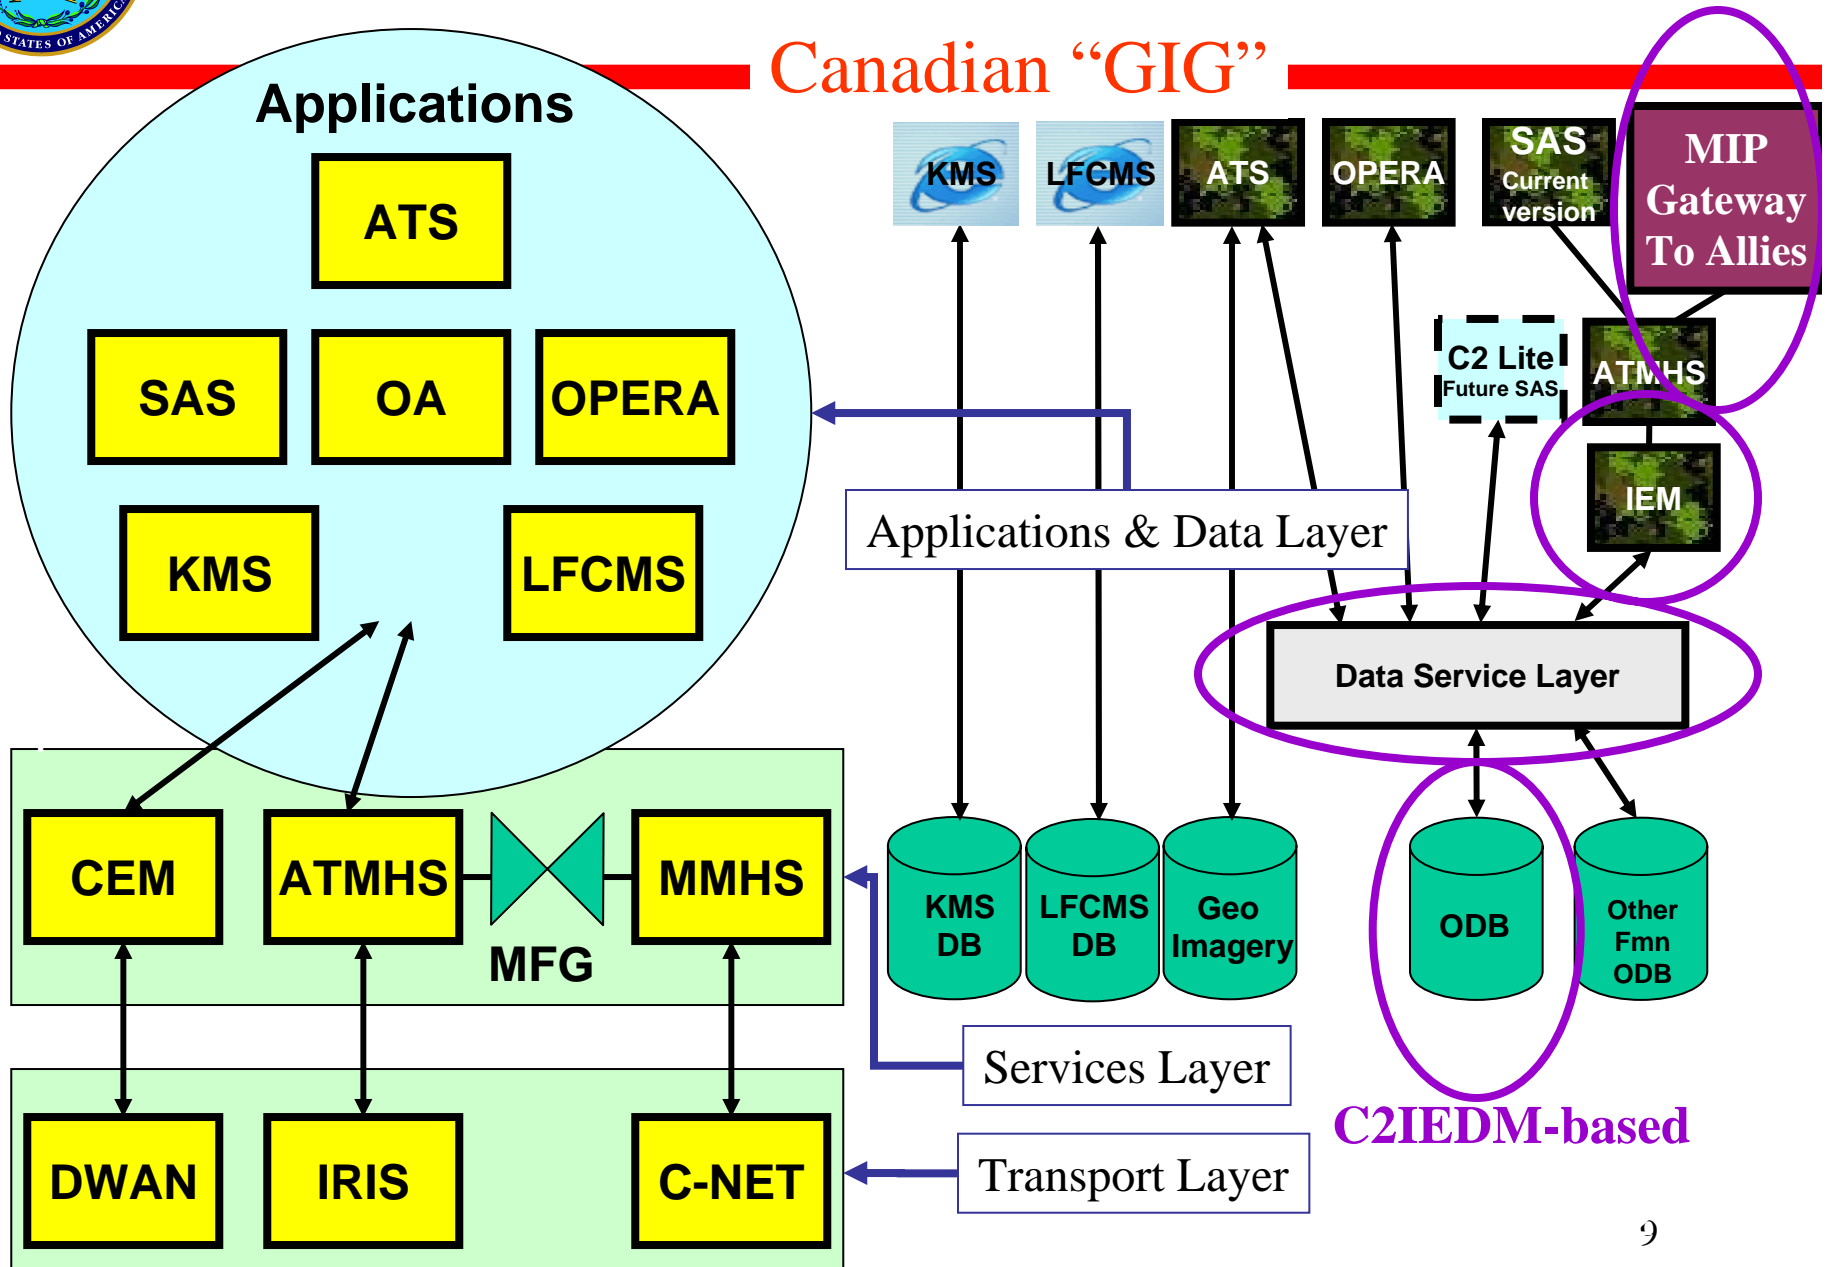

Enables rapid exploitation of diverse data sources by GIG users in a manner that can be customized to meet specific mission demands

Canadian Architectural Implementation

Canadian "GIG"

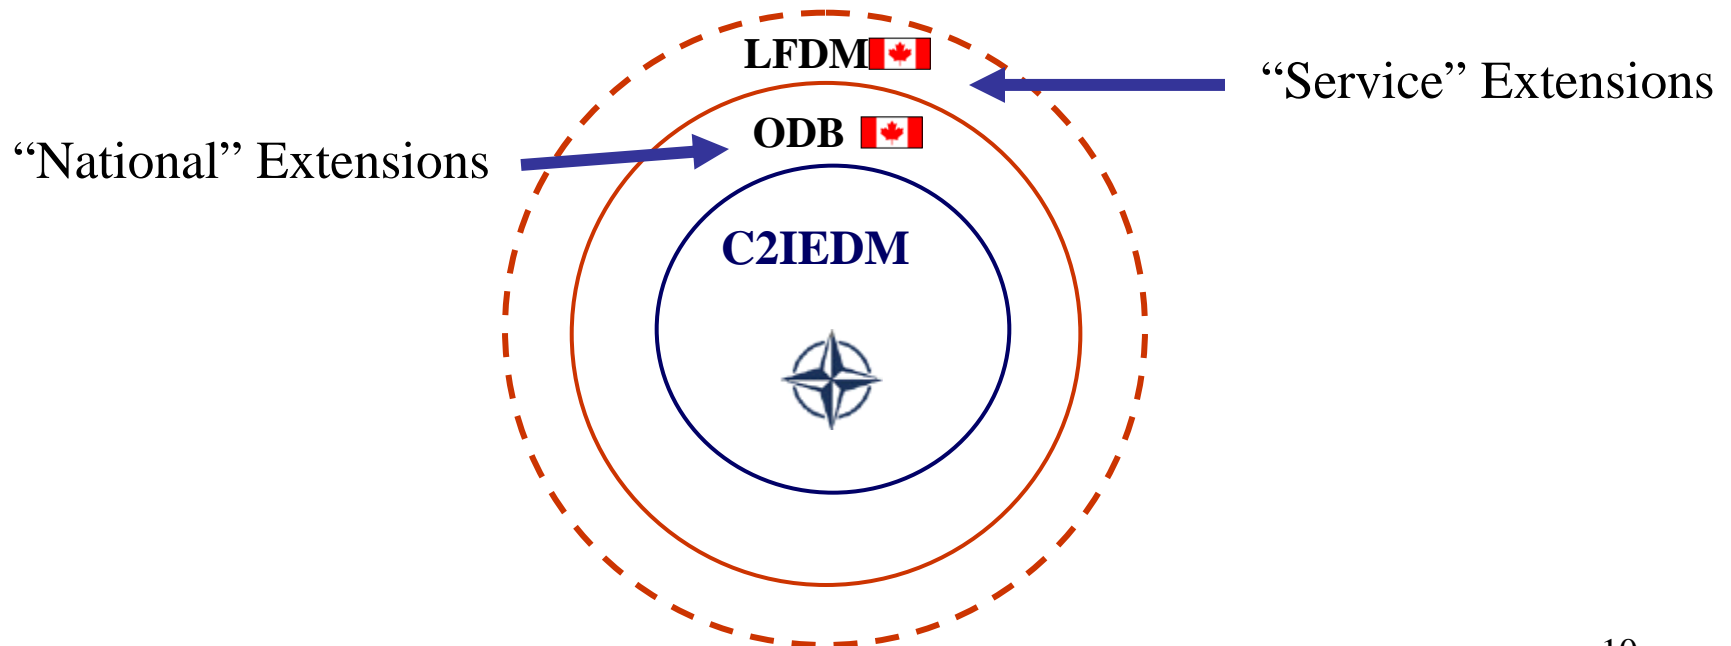

A Canadian Example

$$\text{ODB} = (\text{L})\text{C2IEDM} + \text{ARM} + \text{OPERA} + \text{ATS}$$

- (L)C2IEDM --- Core MIP Database
- ARM --- ATCCIS Replication Model data
- Metadata for integrity and replication
- OPERA --- Planning Context
- ATS --- Tactical Context

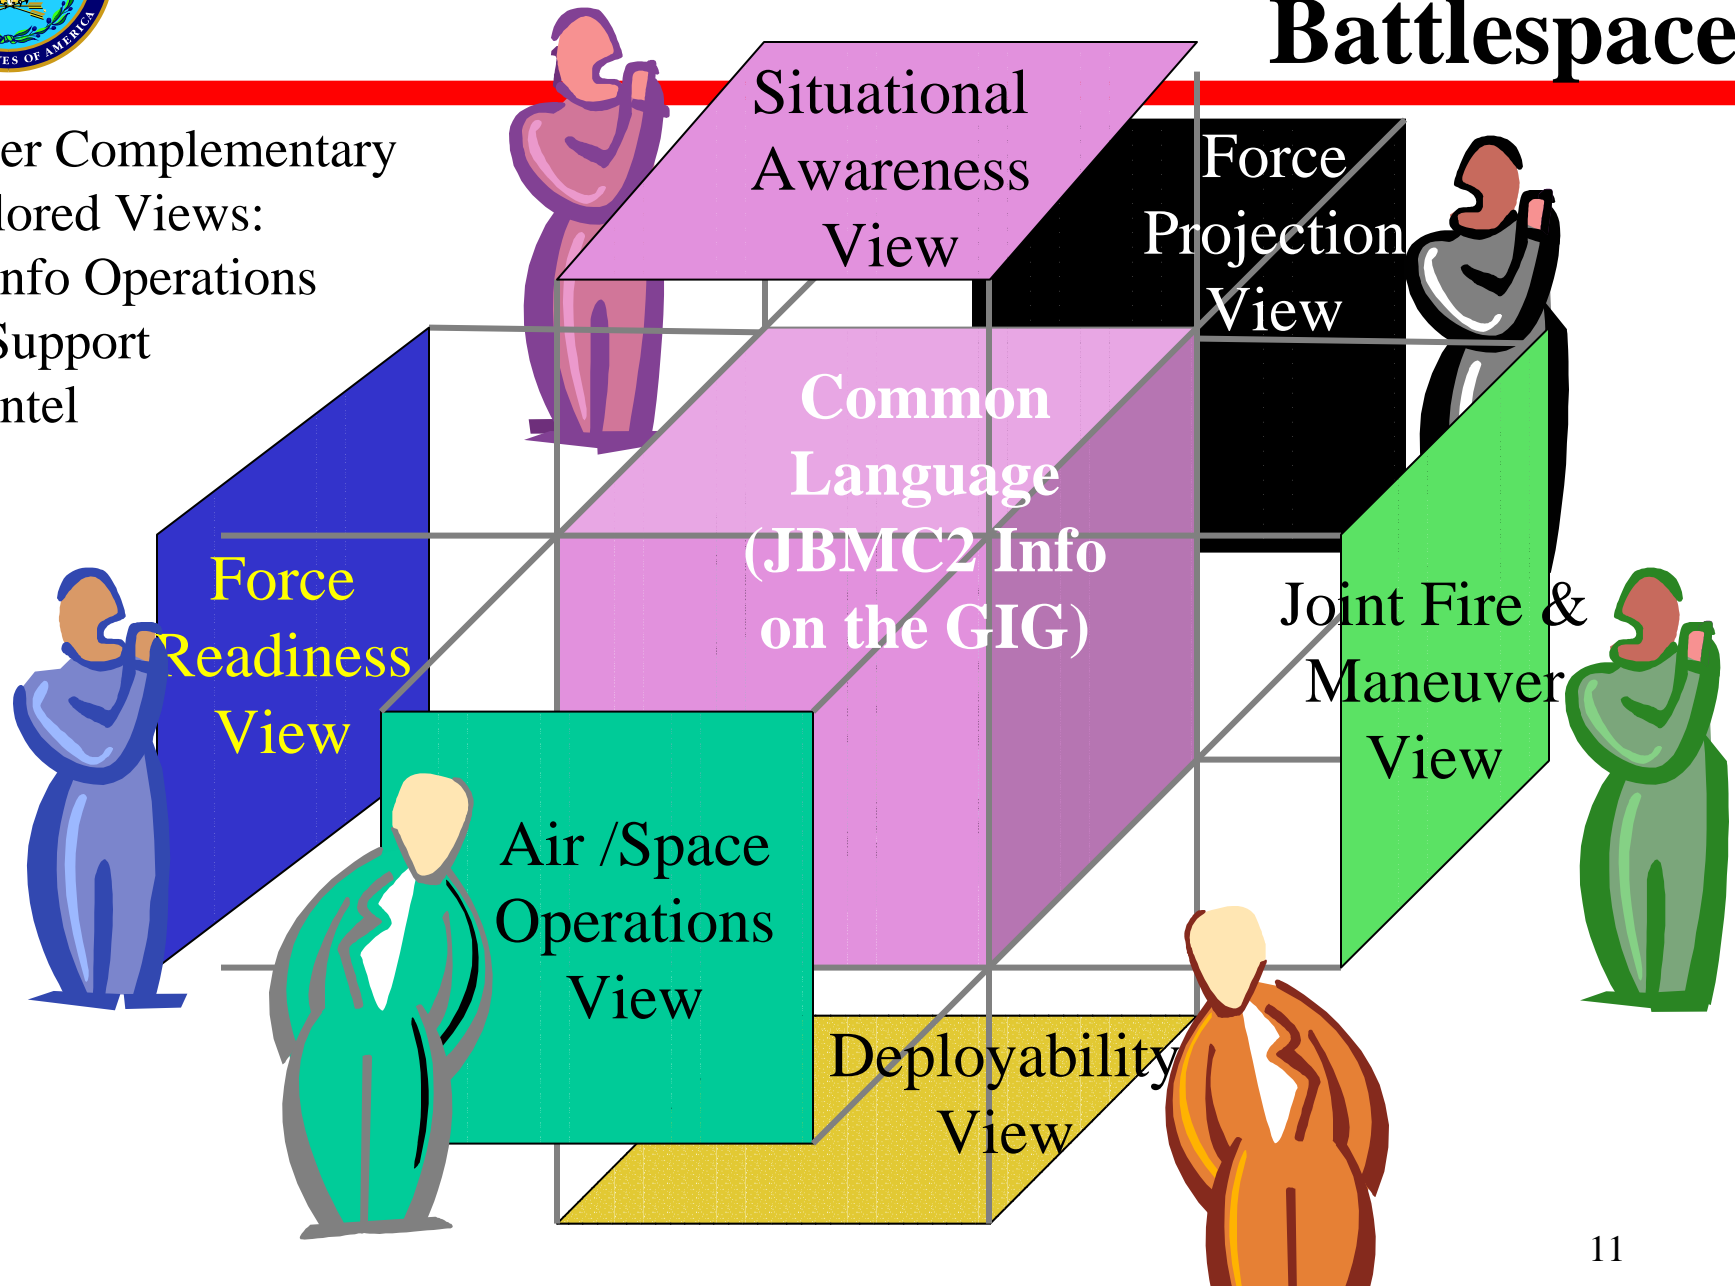

Ontologic Views of the Joint Battlespace

Other Complementary Tailored Views:

- Info Operations
- Support
- Intel

Information-Related Principles of GIG

Most Important Information-Related Principles of GIG:

- 1. Connect “islands of interoperability.”
(Page 1 of GIG CRD)**
- 2. Base this interoperability on community of interest (COI) ontologies.
(Page 15 of *DoD Net-Centric Data Strategy*)**
- 3. Software agents will be used to find needed information.
(Page 8 of *DoD Net-Centric Data Strategy*)**

Note: These principles underlie several long-running and successful DoD efforts.

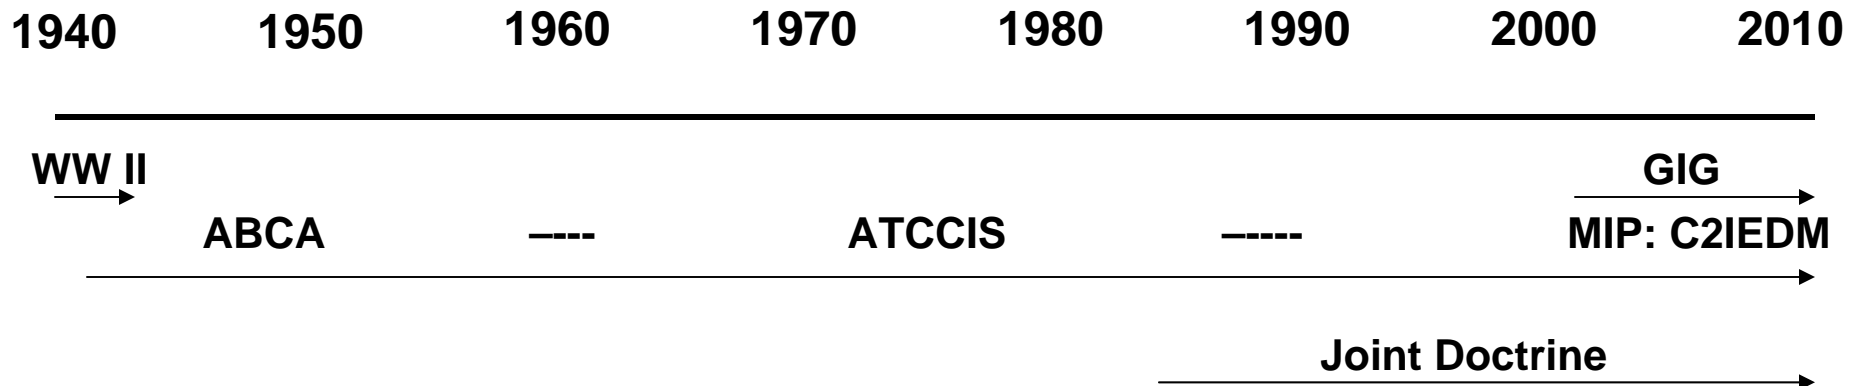

What you can do

1. **GIG vision is sound, but FY 08 interoperability goal requires focus and full exploitation of available assets: **JBMC2 challenges** provide **LEADERSHIP opportunities**.**
2. **ACTDs and ACTD-related activities have already implemented capabilities based on GIG's information principles: continue your **SUPPORT**, help **EDUCATE** the users!**
3. **Implementation of GIG vision will require exemplars, hardware and software tools, doctrinal publications, and formal school graduates trained in the GIG's principles and TTPs: continue **SUPPORT****
4. **Industry can lead by embracing the DoD Data Strategy Concepts and usability of the **C2IEDM**.**

Modern Interoperability / Synchronization

Notable Programs Since Start of WWII

ABCA: Australian, British, Canadian & American Armies
C2IEDM: C2 Information Exchange Data Model

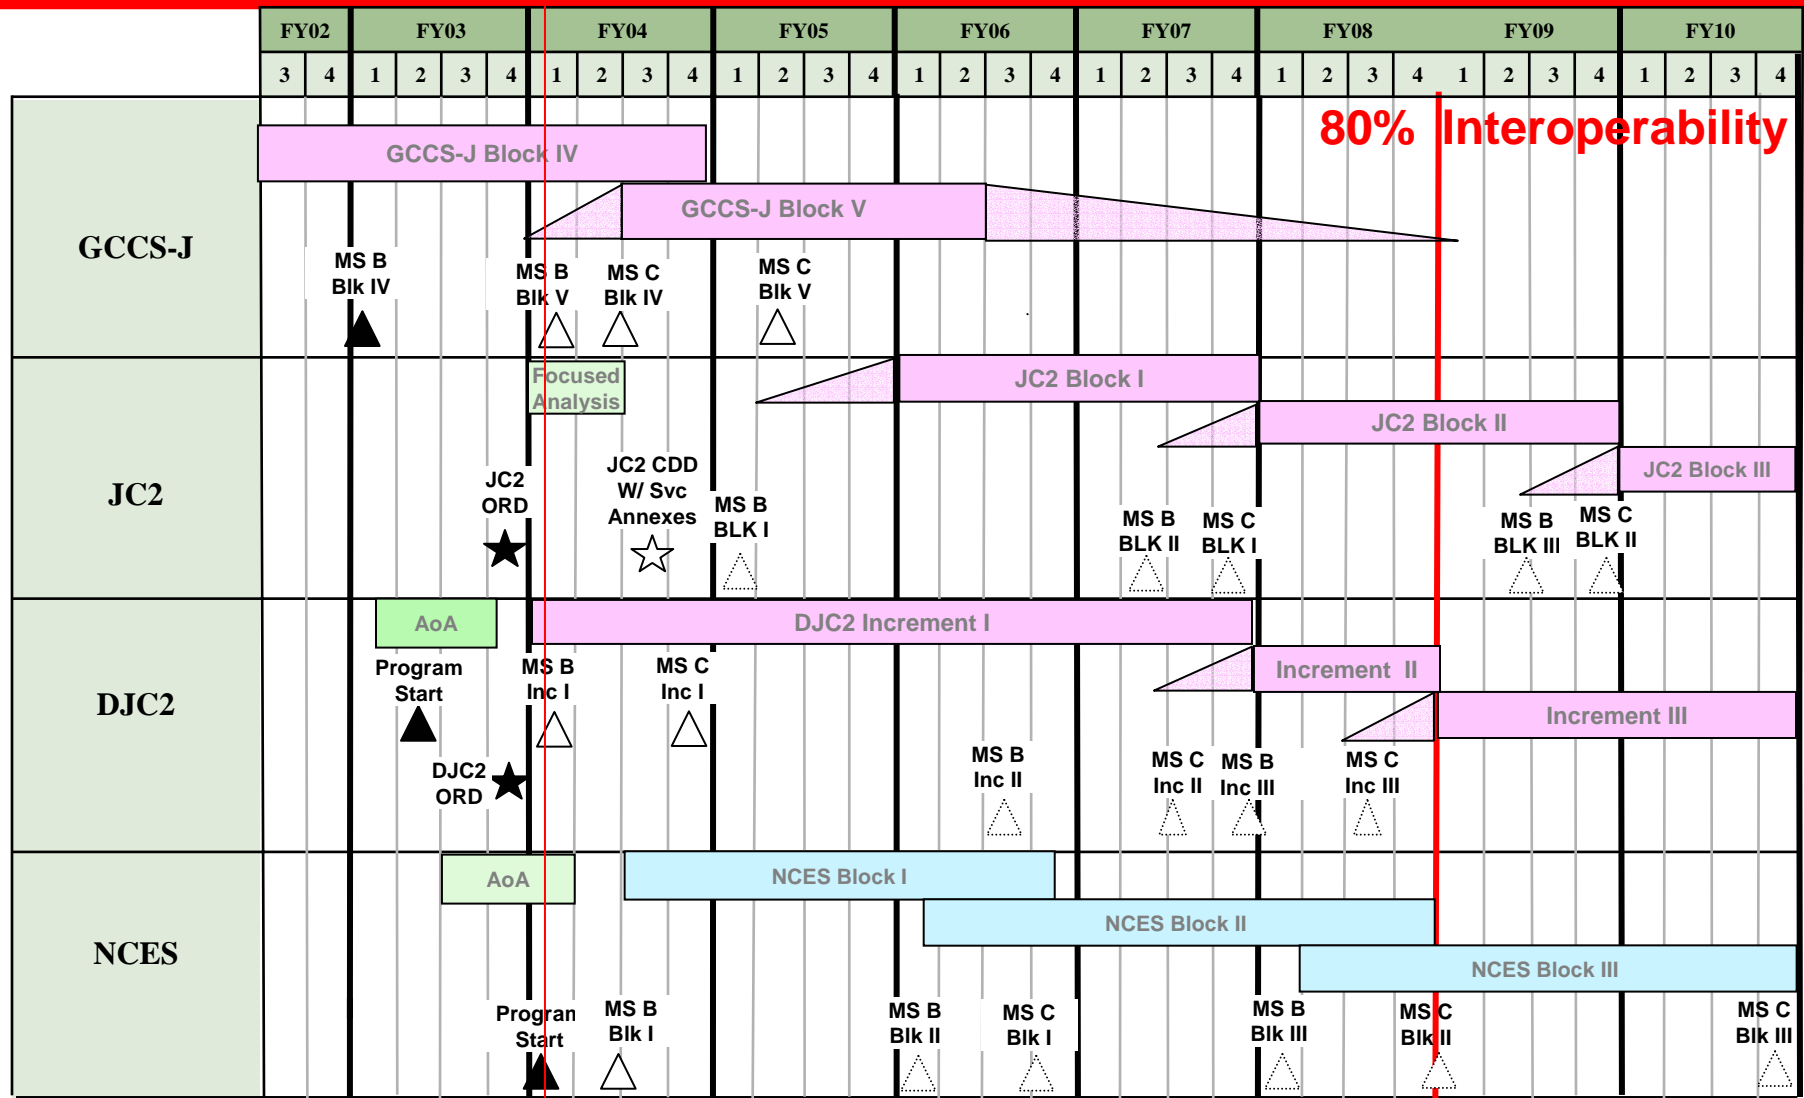

Considerations:

1. **Joint doctrine and similar efforts show that the first 4 or 5 years are often spent getting organized unless a leader promulgates and enforces a good vision.**
2. **The GIG efforts began with “Joint Vision 2010” and were formally documented with the approval of the CRD in July 2001. Data strategy was just published (2003), two years after the CRD, which indicates GIG vision is evolving, slowly.**
3. **Introduction of rifled-artillery technology by Prussians in 19th Century is example of rapid transformation that GIG needs to emulate if deadline is to be met.**

Program Schedule Synchronization

GCCS-J/JC2/DJC2/NCES (with goal and no \$ for JC2 until FY06)
