

Testing of COL PRO as Part of an Operational System

James A. Hanzelka
Protection Commodity Lead
West Desert Test Center
U. S. Army Dugway Proving Ground

Topics

- DPG Overview
 - Mission
 - DPG Overview
 - Command Structure
 - Organization
- DPG Test Mission
- Vehicle System COL PRO Tests
 - Vehicle Test Ca. 1990
 - Vehicle Test 2000
 - Vehicle Test 2004
- Support for COL PRO System Testing

Mission

- To test U.S. & Allied chemical & biological defense systems & perform NBC survivability testing of defense materiel
- To provide support to the chemical & biological weapons conventions
- To test environmental characterization & remediation technologies
- To safeguard the environment
- To operate & maintain an installation to support the test mission providing a high quality of life for our employees & residents
- Manage Developmental Test Command Meteorology Program

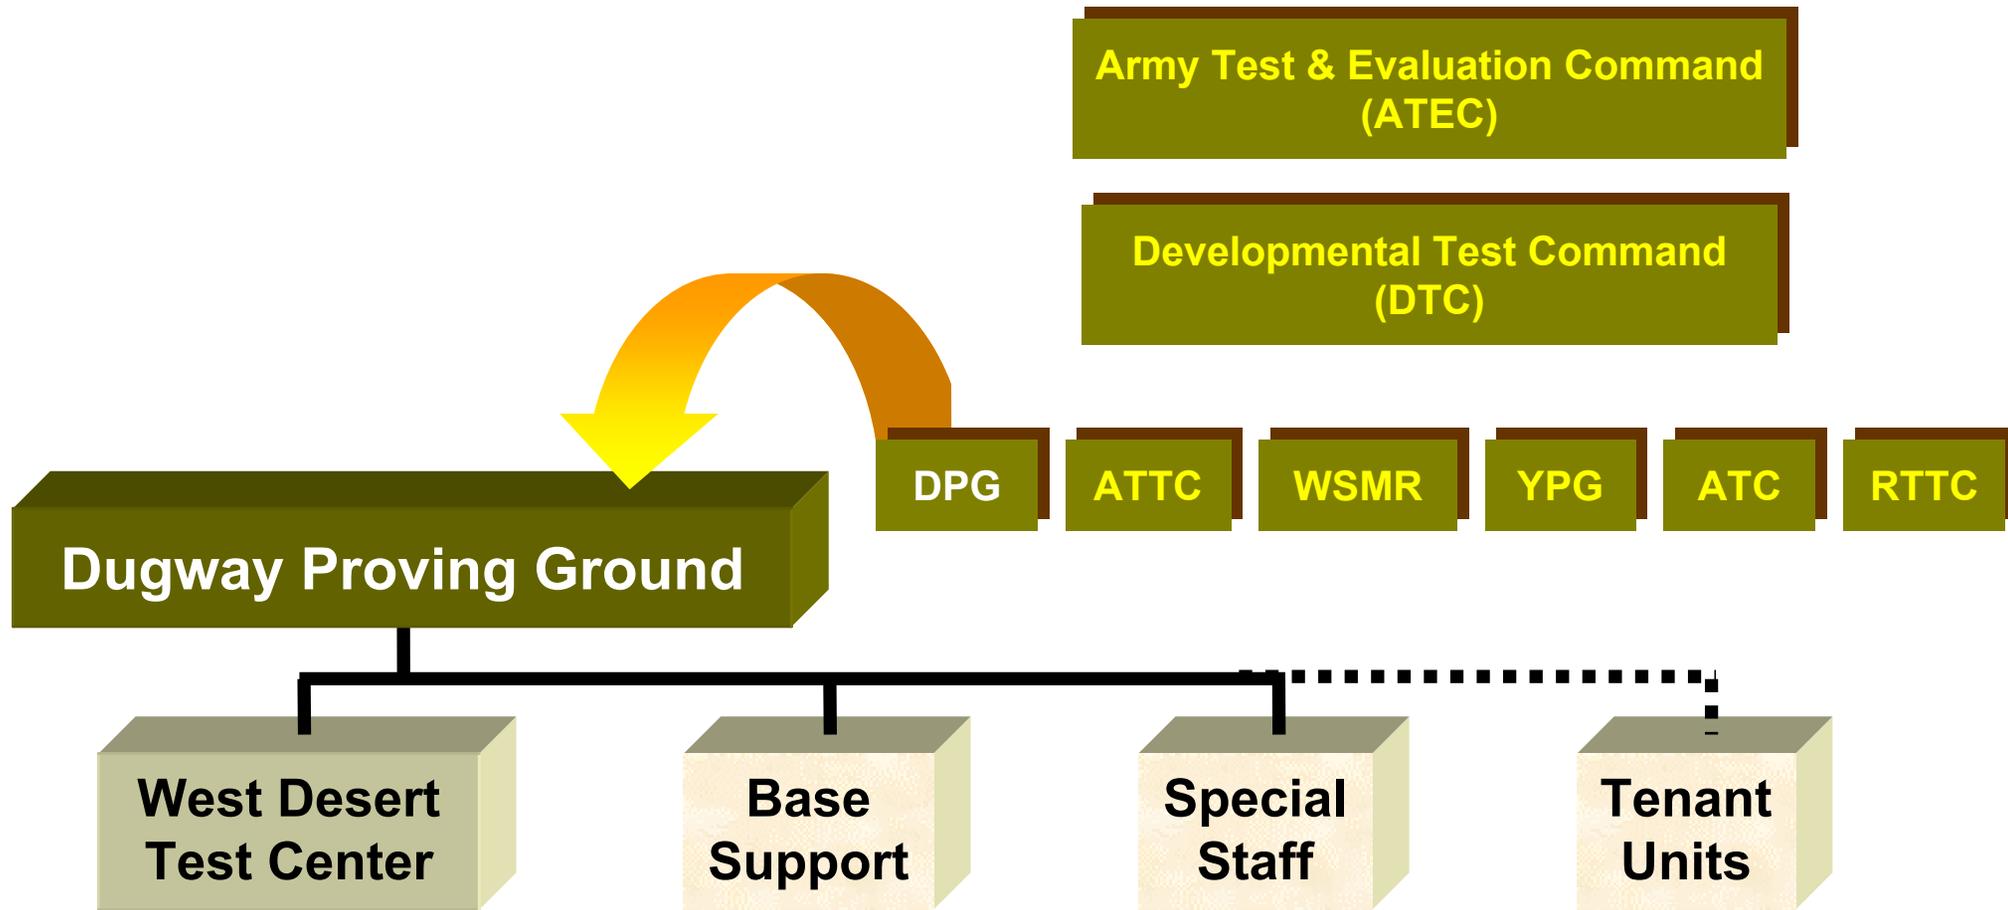

Resources

- Area: 1,300 sq. miles
- Workforce: 1,481
- Residents: 940
- Test Facilities/Capabilities: 673 buildings (chambers, test grids, laboratories, etc.)
- Annual Budget: \$114.5M (Projected FY-04)
- Dugway is part of the Utah Test & Training Range.
Largest training area within the continental U.S.

Command Structure

Organization

Office Of The Commander

Technical Director

SGM

Garrison

- Resource Management Division
- Environmental Programs
- Office Of Equal Employment Opportunity
- Internal Review & Audit Compliance Office
- Chaplain Activities Office
- Law Enforcement & Security Division
- Community Activities Division
- Division Of Installation Support
- Information Technology Office

Special Staff

- Plans & Operations Office
- Resource Management Office
- Public Affairs Office
- Protocol Office
- Surety Office
- Command Judge Advocate
- Compliance/Safety Office
- Counterintelligence Office

West Desert Test Center

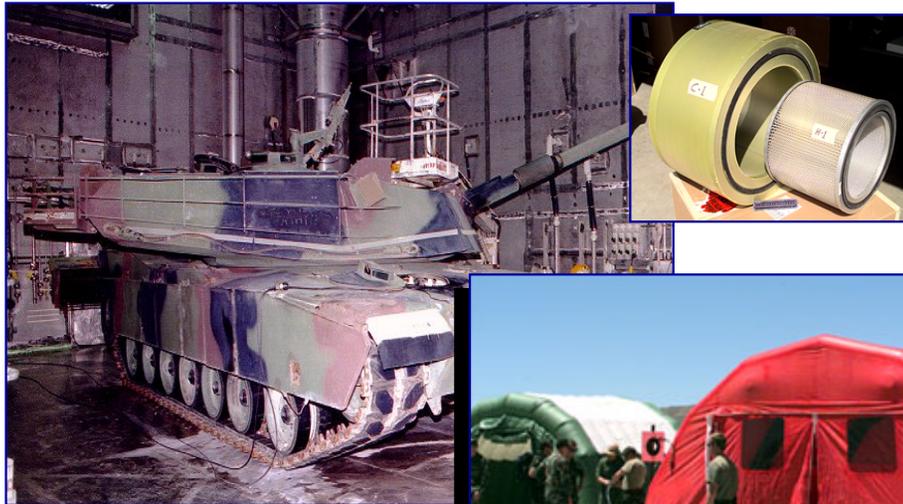

- Chemical Test Division
- Life Sciences Division
- Special Programs
- COR Office
- Meteorological Division
- Munitions & Obscurants Division
- Program Analysis Office
- Test Operations Division
- Test Technology Division

Mission: Shield CB Testing

Individual

- Protective Masks (M40, M45 and JSGPM)
- Protective Suits (JSLIST, JPACE, STEPO, ITAP)
- Protective Boots (MULO, IFS, AFS)
- Protective Gloves (JB1GU, JB2GU)

Collective

- C/B Filter Systems (ACPE, AICPS, OBOGS, MSOGS)
- Whole Shelters (SCPE, Temper Tent, AF Fixed Site Shelters)
- Combat Vehicles (FOX NBCRS, JSLNBCRS, STRYKER)

COL PRO PROGRAMS

Test Programs

- **Southern Breeze**
 - Cargo ship decontamination for the U.S. Navy
- **Collective Protection aboard Ships**

Test Programs

- **RESTOPS**
 - Restoration Operations
 - Agent Fate Testing
 - **Collective Protection Shelter**

Test Programs

- **Aircraft DECON**
 - Large aircraft decontamination for the U.S. Air Force
 - **Aircrew Survivability**

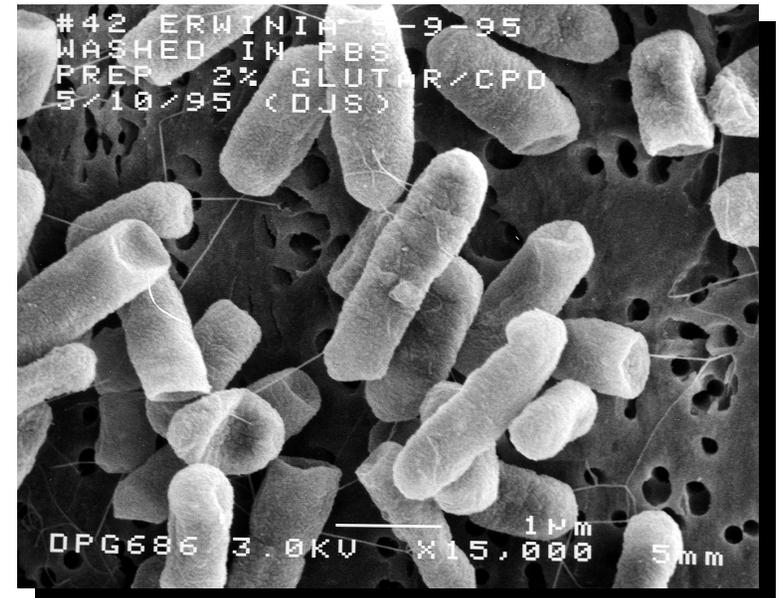

Test Programs

- **BDAP**
 - **Bioforensics
Demonstration &
Application Program**

Test Programs

- Vehicle COL PRO System Testing
- Review of Three Programs
 - ca. 1990
 - 2000
 - 2004

System Testing

- Ca. 1990 Vehicle Test
 - Nuclear Biological Chemical Reconnaissance System
 - Collective Protection System Testing Subtest

Test Protocol

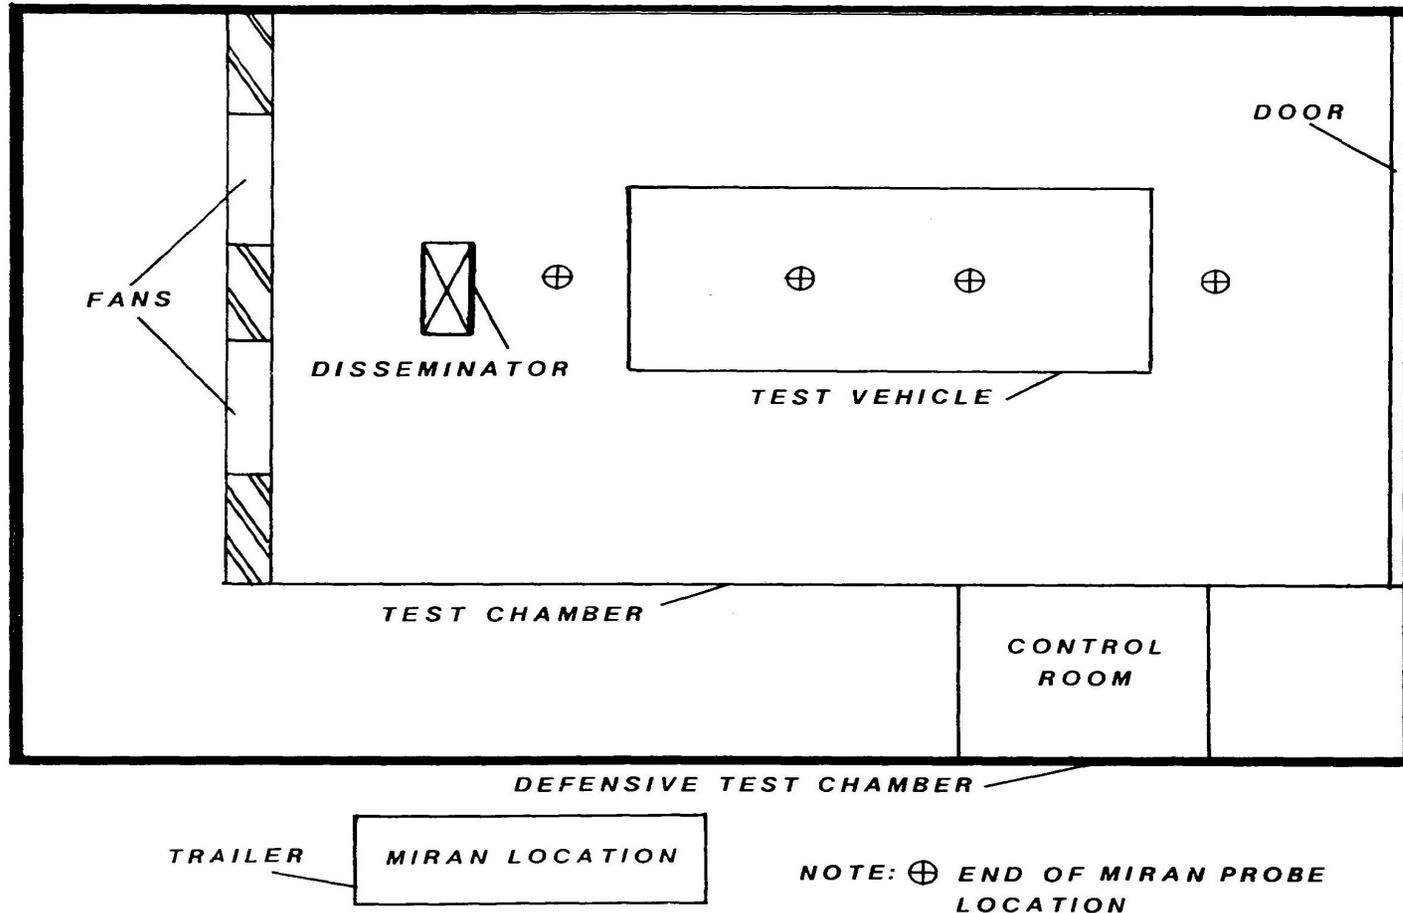

Ca. 1990

- **Several Different Trial Sets Conducted**
 - 5 Trials Each: Moderate Temp, After Rain Exposure, After Dust Exposure, High Temp, Ramp to 600 mg/m³, allow to Decay to 20 mg/m³
 - 4 Trials Ramp to ~250 mg/m³, Hold Until 21,000 mg-min/m³ Reached.
 - 4 Trials at 20 mg/m³ for 660 Minutes
- Vehicle Operated at Fast Idle (< 1000 RPM)
- MIRANS Used to Measure Challenge Concentration
- MINICAMS Used to Measure Inside Concentration
- Target was to Provide >6667:1 PF

Test Protocol

Test Data

Ca. 1990

DATA FROM ALL MIRANS * = MIRANS IN CHAMBER
+ = MIRANS IN VEHICLE

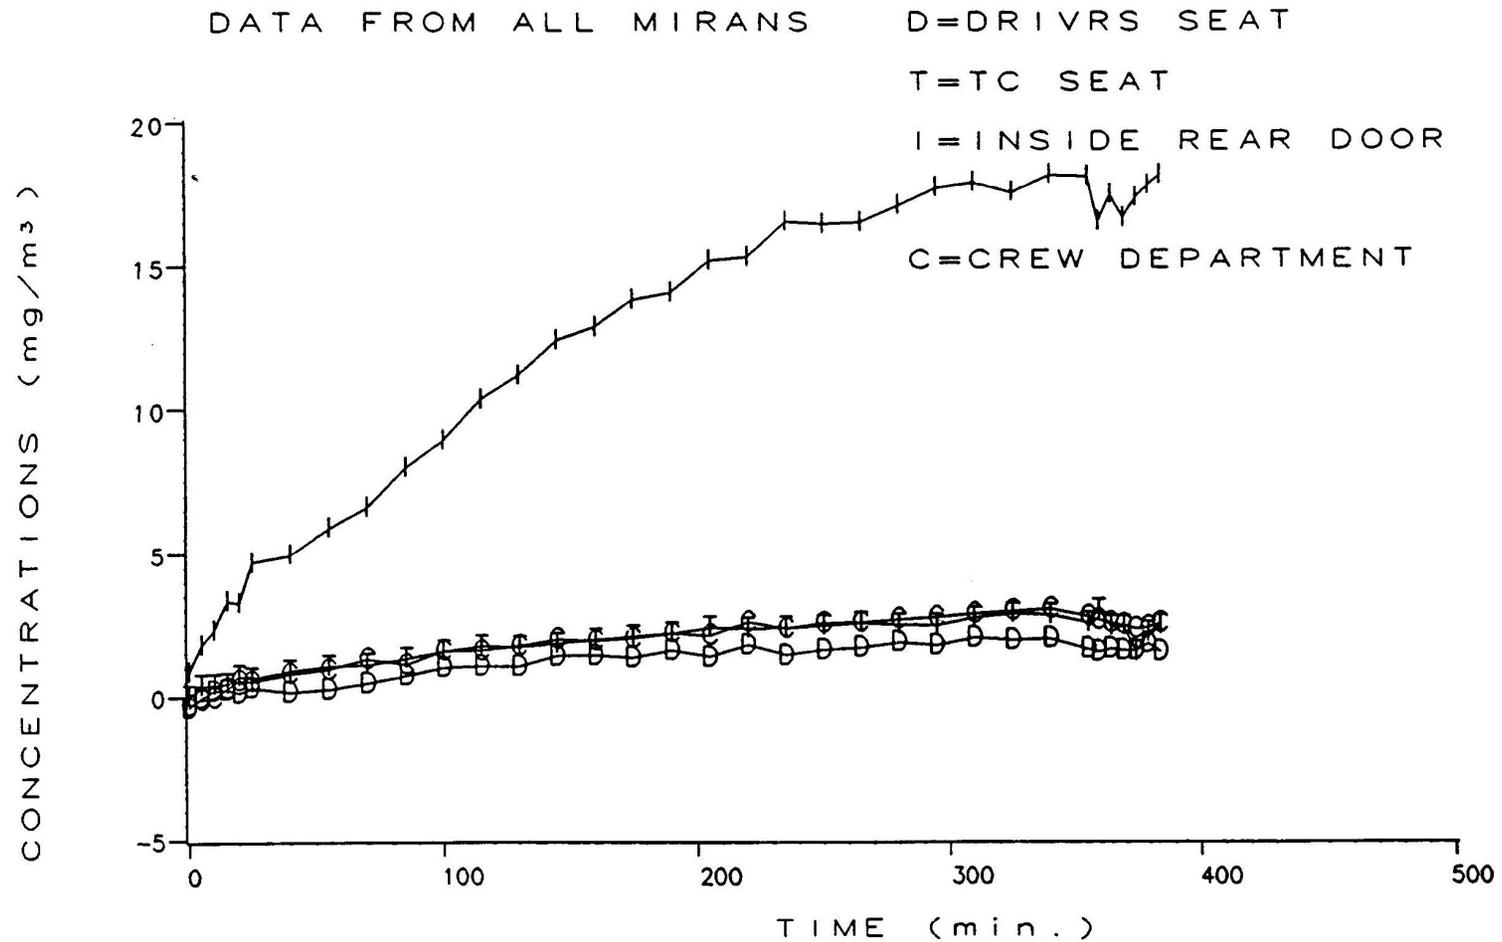

Average MIRAN Data for the Chamber
and Inside Vehicle

Test Data

Ca. 1990

MIRAN Concentrations Measured at Individual Positions Inside the Vehicle

System Test 2000

- Shelter System on a High Mobility Vehicle Frame
- Collective Protection System Testing Subtest

Test Protocol

2000

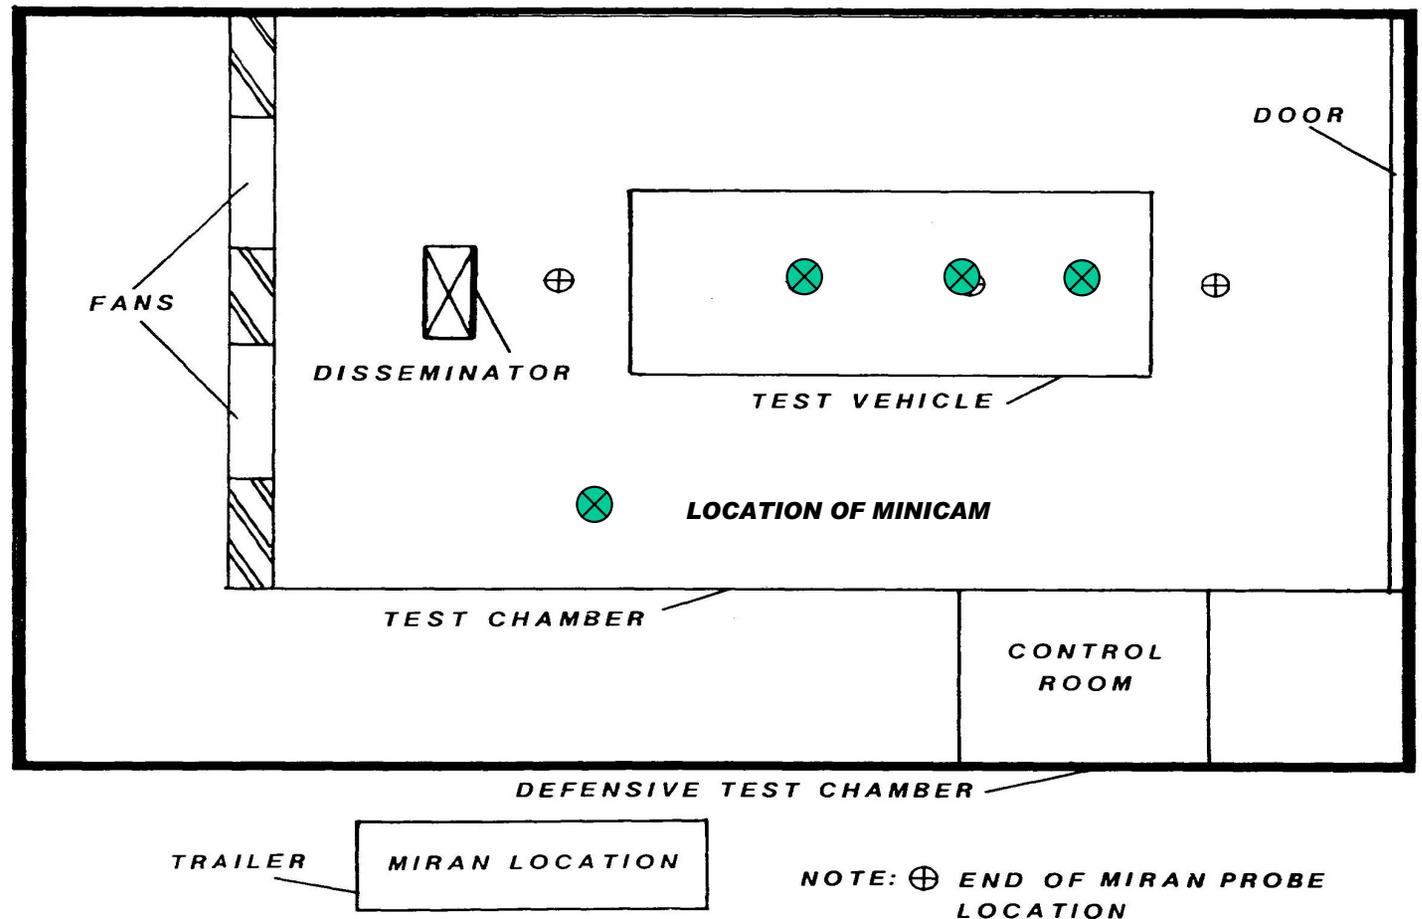

- Vehicle Sited in the DTC and Instrumented with MIRANS Outside the Vehicle and MINICAMS Inside the Vehicle
 - MINICAMS Located inside the Cab and at the Operator Station Inside the Rigid Wall Shelter for Trials 1-4.
 - Third MINICAM Sited Near the Marker Release Door for Trial 5.
- System Operated on Shore Power with all Systems Functioning to Provide Load
- System Challenged with 100 mg/m³ of MeS for 8 hours (24,000 mg-min/m³ CT) for Trials 1-4.
- Trial 5 Chamber was brought to 100 mg/m³, a Marker was Released through the Rear Door when Concentration Reached and 4 More Released 5 Minutes Apart. System Operated for 30 Minutes

Test Setup

2000

Test Setup for
the COL PRO
System Test of
a High
Mobility
Shelter.

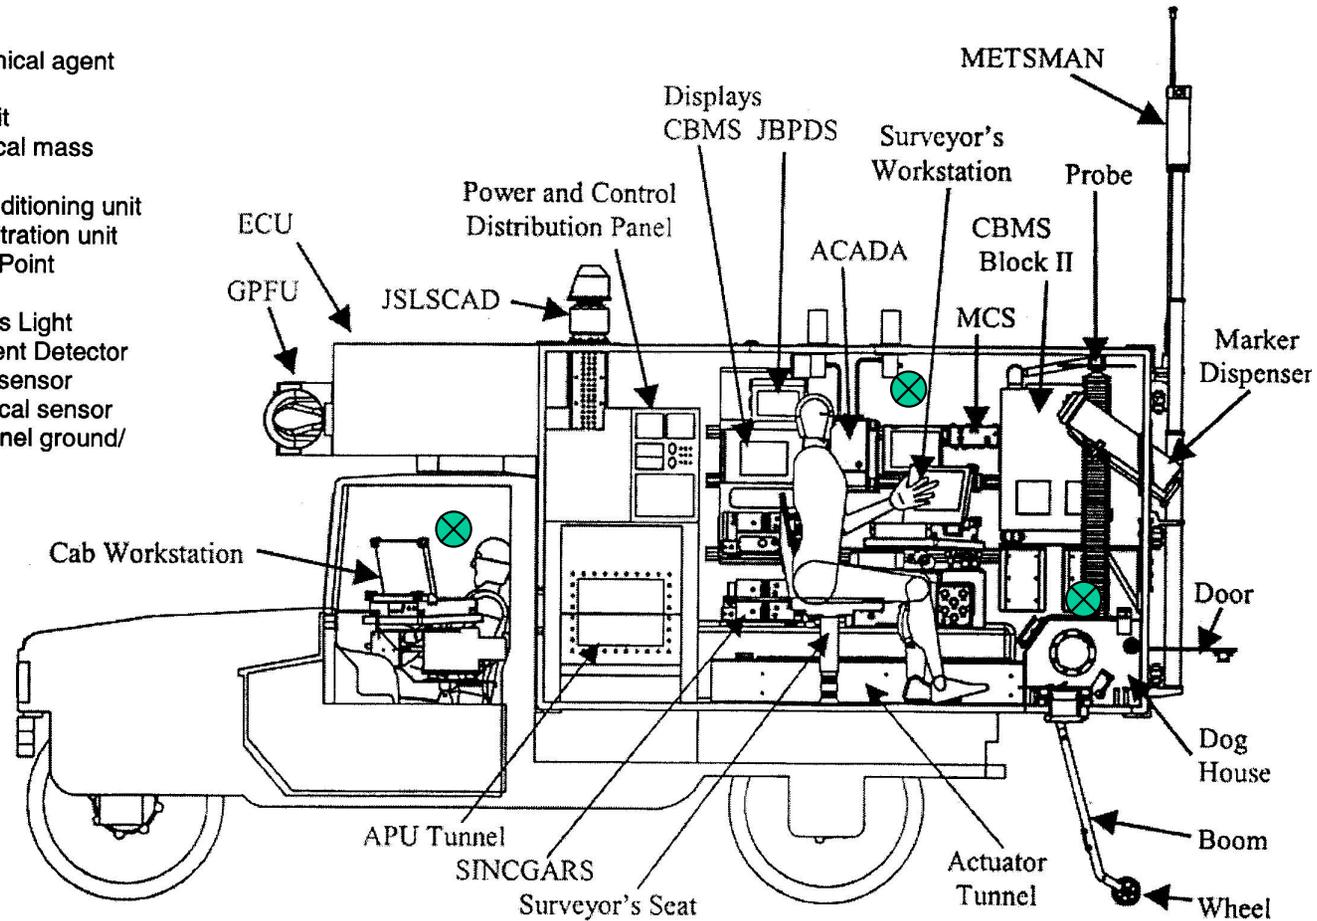

Test Setup

2000

Legend

- ACADA – automatic chemical agent detector system
- APU – auxiliary power unit
- CBMS – chemical/biological mass spectrometer
- ECU – environmental conditioning unit
- GPFU – gas/particulate filtration unit
- JBPDS – Joint Biological Point Detection System
- JSLSCAD – Joint Services Light Standoff Chemical Agent Detector
- MCS – multiple chemical sensor
- METSMAN – meteorological sensor
- SINGGARS – single channel ground/airborne radio system

2000

System Test

2004

- **New Family of Light-Weight Tactical Vehicles**
- **Collective Protection System Testing**

Test Protocol

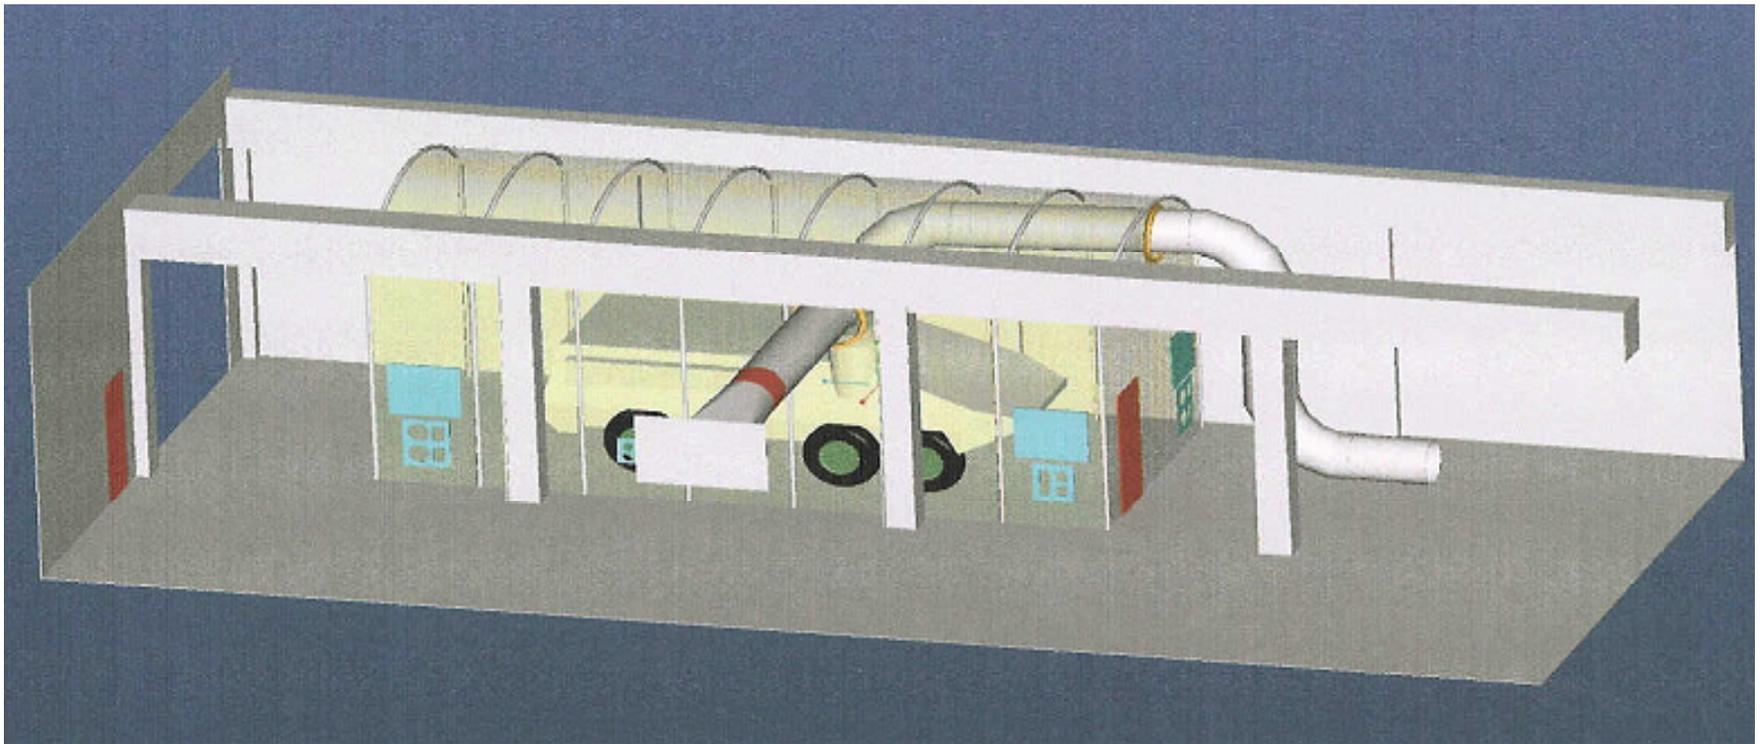

2004

- Vehicle Placed in Shelter Constructed Inside Building 3445
- Samplers:
 - 3 MIRANS Measure Challenge Concentration
 - 3 MINICAMs will be set up to Sample at Three Locations Each at the Driver, Commander and Surveyor's Positions
 - Nine Solid Sorbent Tubes were Located Throughout the Vehicle
 - Eight PADS Samplers were Located in Key Crew Locations
- Vehicle was Challenged at 100 mg/m³ for 6 Hours
- 18 Trials were Conducted:
 - 9 were Conducted with the Vehicle in Idle Only – Static
 - 9 were Conducted with All Sensors Operating and the Marker Dispersing Markers at 5 Minute Intervals

COL PRO Test Additional Support

Life Sciences Test Facility

Capabilities

- **32,000 square feet of multifunctional biology laboratories**
- **Only U.S. facility equipped to test with aerosolized BSL-3 agents**
- **3,500 sq. Biosafety Level 3 (BSL-3) containment suites**
- **Aerosol testing with simulants, pathogens and toxins**

Combined Chemical Test Facility

Capabilities

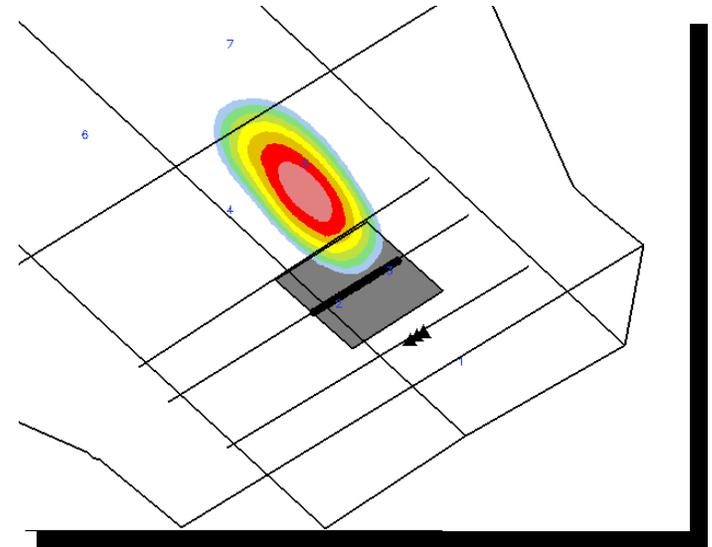

- **35,000 square feet of multifunctional chemistry laboratories**
- **57 fume hoods, 35 surety-capable test suites**
- **Supports chamber & field testing of C/B defense systems**
- **Proposed FBI C/B weapons forensic lab**

Meteorology Division

Capabilities

- Program Manager for the Army RDT&E Meteorology
- Meteorological and atmospheric dispersion modeling support for DPG and its customers
- Project Management for CB defense model development/validation tests
- Weather forecasts and field observations in support of the test mission

Material Test Facility

Capabilities

- Stainless steel chamber 30'x50'x50'
- C/B vapors & aerosols
- Full range of chemical/biological agents & simulants
- Full environmental control chemical agent training

Operational Uses

- Perform real-world decontamination operations
- Allows Agent and Simulant Exposure of whole systems.
- Chemical agent training facility
- C/B defense equipment testing under realistic conditions

Test & Training Ranges

- 1,300 square miles of controlled access, multipurpose grids & facilities
- Certified to test with C/B simulants
- Independently evaluate & test C/B detection, protection, decontamination equipment
- Validate tactics, techniques, & procedures

Test & Training Ranges

- Facilities

Granite Mountain

German Village

Wig Mountain

Test & Training Ranges

- Test Grids

Why Dugway?

- C/B experts in testing, 1,300 sq. miles of remote, controlled access real-estate

Infrastructure in place with state-of-the-art equipment

Meteorology & Obscurants

Airfield On-Site

Areas of Live Fire/Simulant Training

Expert Work Force

Remote C/B Testing Since 1940's

Environmental Permits

Working Relationships other DoD Agencies
